NONNUCLEOSIDE REVERSE TRANSCRIPTASE INHIBITORS

CROSS REFERENCE TO PRIOR APPLICATION

5 This application claims benefit under Title 35 U.S.C. 119(e) of U.S. Provisional Application No. 60/457,130, filed March 24, 2003, which is hereby incorporated by reference in its entirety. The related application filed herewith, Non-Nucleoside Reverse Transcriptase Inhibitors (J. P. Dunn *et al.*), is hereby incorporated by reference in its entirety.

FIELD OF THE INVENTION

10 The invention relates to the field of antiviral therapy and, in particular, to non-nucleoside reverse transcriptase inhibitors for treating Human Immunodeficiency Virus (HIV) mediated diseases. The invention provides novel heterocyclic compounds, pharmaceutical compositions comprising these
15 compounds, methods for treatment or prophylaxis of HIV mediated diseases employing said compounds in monotherapy or in combination therapy, and a process for preparing novel heterocyclic compounds.

BACKGROUND OF THE INVENTION

20 The human immunodeficiency virus HIV is the causative agent of acquired immunodeficiency syndrome (AIDS), a disease characterized by the destruction of the immune system, particularly of the CD4⁺ T-cell, with attendant susceptibility to opportunistic infections. HIV infection is also associated with a precursor AIDS - related complex (ARC), a syndrome characterized by symptoms such as persistent generalized lymphadenopathy, fever and weight loss.

25 In common with other retroviruses, the HIV genome encodes protein precursors known as gag and gag-pol which are processed by the viral protease to afford the protease, reverse transcriptase (RT), endonuclease/integrase and mature structural proteins of the virus core. Interruption of this processing prevents the production of normally infectious virus. Considerable efforts have been directed towards the
30 control of HIV by inhibition of virally encoded enzymes.

Currently available chemotherapy targets two crucial viral enzymes: HIV protease and HIV reverse transcriptase. (J. S. G. Montaner et al. Antiretroviral therapy: 'the state of the art', Biomed & Pharmacother. 1999 53:63-72; R. W. Shafer and D. A. Vuitton, *Highly active retroviral therapy (HAART)*
35 *for the treatment of infection with human immunodeficiency virus type 1*, Biomed. & Pharmacother. 1999 53:73-86; E. De Clercq, *New Developments in Anti-HIV Cehmotherap. Curr. Med. Chem.* 2001 8:1543-

1572). Two general classes of RTI inhibitors have been identified: nucleoside reverse transcriptase inhibitors (NRTI) and non-nucleoside reverse transcriptase inhibitors (NNRTI).

5 NRTIs typically are 2',3'-dideoxynucleoside (ddN) analogs which must be phosphorylated prior to interacting with viral RT. The corresponding triphosphates function as competitive inhibitors or alternative substrates for viral RT. After incorporation into nucleic acids the nucleoside analogs terminate the chain elongation process. HIV reverse transcriptase has DNA editing capabilities which enable resistant strains to overcome the blockade by cleaving the nucleoside analog and continuing the elongation. Currently clinically used NRTIs include zidovudine (AZT), didanosine (ddI), zalcitabine
10 (ddC), stavudine (d4T), lamivudine (3TC) and tenofovir (PMPA).

NNRTIs were first discovered in 1989. NNRTI are allosteric inhibitors which bind reversibly at a nonsubstrate binding site on the HIV reverse transcriptase thereby altering the shape of the active site or blocking polymerase activity. (R. W. Buckheit, Jr., *Non-nucleoside reverse transcriptase inhibitors: perspectives for novel therapeutic compounds and strategies for treatment of HIV infection*, *Expert Opin. Investig. Drugs* **2001** 10(8):1423-1442; E. De Clercq *The role of non0-nuceloside reverse transcriptase inhibitors (NNRTIs) in the therapy of HIV-1 infection*, *Antiviral Res.* **1998** 38:153-179; G. Moyle, *The Emerging Roles of Non-Nucleoside Reverse Transcriptase Inhibitors in Antiviral Therapy*, *Drugs* **2001** 61(1):19-26) Although over thirty structural classes of NNRTIs have been identified in the laboratory,
20 only three compounds have been approved for HIV therapy: efavirenz, nevirapine and delavirdine. Although initially viewed as a promising class of compounds, *in vitro* and *in vivo* studies quickly revealed the NNRTIs presented a low barrier to the emergence of drug resistant HIV strains and class-specific toxicity. Drug resistance frequently develops with only a single point mutation in the RT.

25 While combination therapy with NRTIs, PIs and NNRTIs has, in many cases, dramatically lowered viral loads and slowed disease progression, significant therapeutic problems remain. The cocktails are not effective in all patients, potentially severe adverse reactions often occur and the rapidly-replicating HIV virus has proven adroit at creating mutant drug-resistant variants of wild type protease and reverse transcriptase.

30 There remains a need for safer drugs with activity against wild type and commonly occurring resistant strains of HIV.

Benzyl-pyridazinone compounds have been extensively investigated as thyroxin analogs which can decrease plasma cholesterol without stimulating cardiac activity (A. H. Underwood *et al.* *A thyromimetic that decreases plasma cholesterol without increasing cardiovascular activity Nature* 1986 324(6096):425-429; P. D. Leeson *et al.* *Selective thyromimetics. Cardiac-sparing thyroid hormone analogs containing 3'-arylmethyl substituents J. Med Chem* 1989 32(2):320-326; P. D. Leeson *et al.* EP 0188351). WO9624343 (D. J. Dunnington) discloses oxo-pyridazinylmethyl substituted tyrosines are selective antagonists for the haematopoietic phosphatase SH2 domain which may render them useful to increase erythropoiesis and haematopoiesis. WO 9702023 (D. J. Dunnington) and WO9702024 (D. J. Dunnington) further disclose these compounds are specific inhibitors of the human Stat 6 SH2 domain and may be useful for treating asthma, allergic rhinitis and anemia. WO2001085670 (H. Shiohara *et al.*) discloses related malonamide derivatives useful for treating circulatory diseases. EP 810218 (D. A. Allen *et al.*) discloses benzoyl substituted benzyl-pyridazinone compounds which are cyclooxygenase inhibitors and potential antiinflammatory or analgesic compounds. None of the references teaches therapy for HIV infections or inhibition of HIV reverse transcriptase.

SUMMARY OF THE INVENTION

The present invention relates to a compounds according to formula I, methods for treating diseases mediated by human immunodeficiency virus by administration of a compound according to formula I, pharmaceutical compositions for treating diseases mediated by human immunodeficiency virus containing a compound according to formula I, and processes to prepare a compound according to formula I

wherein;

X¹ is selected from the group consisting of R⁵O, R⁵S(O)_n, R⁵CH₂, R⁵CH₂O, R⁵CH₂S(O)_n, R⁵OCH₂, R⁵S(O)_nCH₂ and NR⁵R⁶;

X² is selected from the group consisting of *o*-phenylene, 1,2-cyclohexenylene, O, S, and NR⁷;

R¹ and R² are

- (i) each independently selected from the group consisting of hydrogen, C₁₋₆ alkyl, C₁₋₆ haloalkyl, C₃₋₈ cycloalkyl, C₁₋₆ alkylthio, C₁₋₆ alkylsulfinyl, C₁₋₆ alkylalkylsulfonyl, C₁₋₆ haloalkoxy, C₁₋₆ haloalkylthio, halogen, amino, alkylamino, dialkylamino, aminoacyl, nitro and cyano; or,

- (ii) taken together are -CH=CH-CH=CH-; or,

(iii) taken together along with the carbons to which they are attached to form a five- or six-membered heteroaromatic or heterocyclic ring with a one or two heteroatoms independently selected from the group consisting of O, S and NH;

R^3 and R^4 are each independently selected from the group consisting of hydrogen, C_{1-6} alkyl, C_{1-6} haloalkyl, C_{3-8} cycloalkyl, C_{1-6} alkoxy, C_{1-6} alkylthio, C_{1-6} haloalkoxy, C_{1-6} haloalkylthio, halogen, amino, alkylamino, dialkylamino, aminoacyl, nitro and cyano;

R^5 is selected from the group consisting of phenyl, naphthyl, pyrdinyl, pyridinyl N-oxide, indolyl, indolyl N-oxide, quinolinyl, quinolinyl N-oxide,, pyrimidinyl, pyrazinyl and pyrrolyl; wherein, said phenyl, said naphthyl, said pyrdinyl, said pyridinyl N-oxide, said indolyl, said indolyl N-oxide, said quinolinyl, said quinolinyl N-oxide,, said pyrimidinyl, said pyrazinyl and said pyrrolyl groups are optionally substituted with one to three substituents independently selected from the group consisting of hydrogen, C_{1-6} alkyl, C_{1-6} haloalkyl, C_{3-8} cycloalkyl, C_{1-6} alkoxy, C_{1-6} alkylthio, C_{1-6} alkylsulfinyl, C_{1-6} alkylalkylsulfonyl, C_{1-6} haloalkoxy, C_{1-6} haloalkylthio, halogen, amino, alkylamino, dialkylamino, aminoacyl, acyl, alkoxycarbonyl, carbamoyl, N-alkylcarbamoyl, N,N-dialkylcarbamoyl, nitro and cyano;

R^6 is hydrogen, C_{1-6} alkyl, or acyl;

R^7 is hydrogen or C_{1-6} alkyl optionally substituted with one or two substituents independently selected from the group consisting of hydroxy, alkoxy, thiol, alkylthio, C_{1-6} alkylsulfinyl, C_{1-6} alkylsulfonyl, halogen, amino, alkylamino, dialkylamino, aminoalkyl, alkylaminoalkyl, and dialkylaminoalkyl;

n is an integer from 0 to 2; and,

hydrates, solvates, clathrates and acid addition salts thereof, with the proviso that if X^2 is *ortho*-phenylene, R^5 can not unsubstituted phenyl.

The invention also relates to a process for preparing a compound according to formula I wherein X^1 is OR^5 or SR^5 , R^5 is an optionally substituted aryl and R^1 - R^4 , R^7 and X^2 are as defined hereinabove

DETAILED DESCRIPTION OF THE INVENTION

In one embodiment of the invention there is provided a compound according to formula I,

wherein X^1 , X^2 , R^1 , R^2 , R^3 , R^4 , R^5 , R^6 , and R^7 are as defined hereinabove, and hydrates, solvates, clathrates and acid addition salts thereof.

In another embodiment of the invention there is provided a compound according to formula I wherein X^1 is OR^5 or SR^5 ; R^3 is hydrogen or fluoro; R^4 is selected from the group consisting of hydrogen, chloro, fluoro and methyl; R^5 is optionally substituted phenyl; and, R^1 , R^2 , R^7 , X^2 and n are as defined
5 hereinabove.

In another embodiment of the present invention there is provided a compound according to formula I wherein X^1 is OR^5 or SR^5 ; R^1 is methyl, ethyl, trifluoromethyl or halogen; R^3 is hydrogen or fluoro; R^4 is selected from the group consisting of hydrogen, chloro, fluoro and methyl; R^5 is optionally substituted
10 phenyl; and, R^2 , R^7 , X^2 and n are as defined hereinabove.

In another embodiment of the present invention there is provided a compound according to formula I wherein X^1 is OR^5 or SR^5 ; R^1 is methyl, ethyl, trifluoromethyl or halogen; R^3 is hydrogen or fluoro; R^4 is selected from the group consisting of hydrogen, chloro, fluoro and methyl; R^5 is monosubstituted phenyl;
15 and, R^2 , R^7 , X^2 and n are as defined hereinabove.

In another embodiment of the present invention there is provided a compound according to formula I wherein X^1 is OR^5 or SR^5 ; R^1 is methyl, ethyl, trifluoromethyl or halogen; R^3 is hydrogen or fluoro; R^4 is selected from the group consisting of hydrogen, chloro, fluoro and methyl; R^5 is 2,5-disubstituted phenyl;
20 and, R^2 , R^7 , X^2 and n are as defined hereinabove.

In another embodiment of the present invention there is provided a compound according to formula I wherein X^1 is OR^5 or SR^5 ; R^1 is methyl, ethyl, trifluoromethyl or halogen; R^3 is hydrogen or fluoro; R^4 is selected from the group consisting of hydrogen, chloro, fluoro and methyl; R^5 is 3,5-disubstituted phenyl;
25 and, R^2 , R^7 , X^2 and n are as defined hereinabove.

In another embodiment of the present invention there is provided a compound according to formula I wherein X^1 is OR^5 or SR^5 ; R^1 is methyl, ethyl, trifluoromethyl or halogen; R^3 is hydrogen or fluoro; R^4 is selected from the group consisting of hydrogen, chloro, fluoro and methyl; R^5 is 2,4-disubstituted phenyl;
30 and R^2 , R^7 , X^2 and n are as defined hereinabove.

In another embodiment of the present invention there is provided a compound according to formula I wherein X^1 is OR^5 or SR^5 ; R^1 is methyl, ethyl, trifluoromethyl or halogen; R^3 is hydrogen or fluoro; R^4 is

selected from the group consisting of hydrogen, chloro, fluoro and methyl; R⁵ is 2,6-disubstituted phenyl; and, R², R⁷, X² and n are as defined hereinabove.

5 In another embodiment of the present invention there is provided a compound according to formula I wherein X¹ is OR⁵ or SR⁵; R¹ and R² are independently hydrogen, C₁₋₆ alkyl, C₁₋₆ haloalkyl, C₃₋₈ cycloalkyl, C₁₋₆ alkoxy, C₁₋₆ alkylthio, C₁₋₆ alkylsulfinyl, C₁₋₆ alkylsulfonyl, C₁₋₆ haloalkoxy, C₁₋₆ haloalkylthio, halogen, amino, alkylamino, dialkylamino, aminoacyl, nitro and cyano; R³ is hydrogen or fluoro; and, R⁴, R⁵, R⁷, X² and n are as defined hereinabove.

10 In another embodiment of the present invention there is provided a compound according to formula I wherein X¹ is OR⁵; R¹ is methyl, ethyl, trifluoromethyl or halogen; R² and R⁴ are independently hydrogen, fluoro, chloro, methyl or ethyl; R³ is hydrogen or fluoro; R⁵ is optionally substituted phenyl; n is 0 to 2; and R⁷ and X² are as defined hereinabove.

15 In another embodiment of the present invention there is provided a compound according to formula I wherein X¹ is OR⁵; R¹ is methyl, ethyl, trifluoromethyl or halogen; R² and R⁴ are independently hydrogen, fluoro, chloro, methyl or ethyl; R³ is hydrogen or fluoro; R⁵ is monosubstituted phenyl; n is 0 to 2; and R⁷ and X² are as defined hereinabove.

20 In another embodiment of the present invention there is provided a compound according to formula I wherein X¹ is OR⁵; R¹ is methyl, ethyl, trifluoromethyl or halogen; R² and R⁴ are independently hydrogen, fluoro, chloro, methyl or ethyl; R³ is hydrogen or fluoro; R⁵ is monosubstituted phenyl and the substituent is selected from the group consisting of halogen, cyano, C₁₋₆ alkyl, C₁₋₆ haloalkyl, C₁₋₆ alkoxy, C₁₋₆ alkylthio and C₁₋₆ haloalkoxy; and, R⁴, R⁷, X² and n are as defined hereinabove.

25

In another embodiment of the present invention there is provided a compound according to formula I wherein X¹ is OR⁵; R¹ is methyl, ethyl, trifluoromethyl or halogen; R² and R⁴ are independently hydrogen, fluoro, chloro, methyl or ethyl; R³ is hydrogen or fluoro; R⁵ is 2,5-disubstituted phenyl; n is 0 to 2; and R⁷ and X² are as defined hereinabove.

30

In another embodiment of the present invention there is provided a compound according to formula I wherein X¹ is OR⁵; R¹ is methyl, ethyl, trifluoromethyl or halogen; R² and R⁴ are independently hydrogen, fluoro, chloro, methyl or ethyl; R³ is hydrogen or fluoro; R⁵ is 2,5-disubstituted phenyl and the substituents are independently selected from the group consisting of halogen, cyano, C₁₋₆ alkyl, C₁₋₆

haloalkyl, C₁₋₆ alkoxy, C₁₋₆ alkylthio and C₁₋₆ haloalkoxy; and, R⁴, R⁷, X² and n are as defined hereinabove.

5 In another embodiment of the present invention there is provided a compound according to formula I wherein X¹ is OR⁵; R¹ is methyl, ethyl, trifluoromethyl or halogen; R² and R⁴ are independently hydrogen, fluoro, chloro, methyl or ethyl; R³ is hydrogen or fluoro; R⁵ is 3,5-disubstituted phenyl; n is 0 to 2; and R⁷ and X² are as defined hereinabove.

10 In another embodiment of the present invention there is provided a compound according to formula I wherein X¹ is OR⁵; R¹ is methyl, ethyl, trifluoromethyl or halogen; R² and R⁴ are independently hydrogen, fluoro, chloro, methyl or ethyl; R³ is hydrogen or fluoro; R⁵ is 3,5-disubstituted phenyl and the substituents are independently selected from the group consisting of halogen, cyano, C₁₋₆ alkyl, C₁₋₆ haloalkyl, C₁₋₆ alkoxy, C₁₋₆ alkylthio and C₁₋₆ haloalkoxy; and, R⁴, R⁷, X² and n are as defined hereinabove.

15 In another embodiment of the present invention there is provided a compound according to formula I wherein X¹ is OR⁵; R¹ is methyl, ethyl, trifluoromethyl or halogen; R² and R⁴ are independently hydrogen, fluoro, chloro, methyl or ethyl; R³ is hydrogen or fluoro; R⁵ is 2,4-disubstituted phenyl; n is 0 to 2; and R⁷ and X² are as defined hereinabove.

20 In another embodiment of the present invention there is provided a compound according to formula I wherein X¹ is OR⁵; R¹ is methyl, ethyl, trifluoromethyl or halogen; R² and R⁴ are independently hydrogen, fluoro, chloro, methyl or ethyl; R³ is hydrogen or fluoro; R⁵ is 2,4-disubstituted phenyl and the substituents are independently selected from the group consisting of halogen, cyano, C₁₋₆ alkyl, C₁₋₆ haloalkyl, C₁₋₆ alkoxy, C₁₋₆ alkylthio and C₁₋₆ haloalkoxy; and, R⁴, R⁷, X² and n are as defined hereinabove.

25 In another embodiment of the present invention there is provided a compound according to formula I wherein X¹ is OR⁵; R¹ is methyl, ethyl, trifluoromethyl or halogen; R² and R⁴ are independently hydrogen, fluoro, chloro, methyl or ethyl; R³ is hydrogen or fluoro; R⁵ is 2,6-disubstituted phenyl; n is 0 to 2; and R⁷ and X² are as defined hereinabove.

30 In another embodiment of the present invention there is provided a compound according to formula I wherein X¹ is OR⁵; R¹ is methyl, ethyl, trifluoromethyl or halogen; R² and R⁴ are independently

hydrogen, fluoro, chloro, methyl or ethyl; R^3 is hydrogen or fluoro; R^5 is 2,6-disubstituted phenyl and the substituents are independently selected from the group consisting of halogen, cyano, C_{1-6} alkyl, C_{1-6} haloalkyl, C_{1-6} alkoxy, C_{1-6} alkylthio and C_{1-6} haloalkoxy; and, R^4 , R^7 , X^2 and n are as defined hereinabove.

5

In another embodiment of the present invention there is provided a compound according to formula I wherein X^1 is OR^5 or SR^5 ; R^3 and R^4 are independently hydrogen, chloro, fluoro or methyl; R^5 is optionally substituted pyridinyl, pyridinyl N-oxide, indolyl, indolyl N-oxide, quinolinyl, quinolinyl N-oxide, pyrimidinyl, pyrazinyl and pyrrolyl; and, X^2 , R^1 , R^2 , R^3 , R^7 and n are as defined hereinabove.

10

In another embodiment of the present invention there is provided a compound according to formula I wherein R^1 and R^2 along with the carbon atoms to which they are attached form a phenyl, dihydropyran, dihydrofuran or furan ring; and, X^1 , X^2 , R^3 , R^4 , R^5 , R^6 , R^7 and n are as defined hereinabove.

15

In another embodiment of the present invention there is provided a compound according to formula I wherein X^1 is OR^5 or SR^5 ; R^1 and R^2 along with the carbon atoms to which they are attached form a phenyl, dihydropyran, dihydrofuran or furan ring; R^3 is hydrogen, R^4 is hydrogen or fluoro; R^5 is optionally substituted phenyl; and, X^2 , R^7 and n are as defined hereinabove.

20

In another embodiment of the present invention there is provided a method for treating an HIV infection, or preventing an HIV infection, or treating AIDS or ARC, comprising administering to a host in need thereof a therapeutically effective amount of a compound of formula I

25

wherein, X^1 , X^2 , R^1 , R^2 , R^3 , R^4 , R^5 , R^6 , R^7 and n are as defined hereinabove, and hydrates, solvates, clathrates and acid addition salts thereof.

30

In another embodiment of the present invention there is provided a method for treating an HIV infection, or preventing an HIV infection, or treating AIDS or ARC, comprising administering to a host in need thereof a therapeutically effective amount of a compound of formula I wherein: X^1 is OR^5 ; R^1 is methyl, ethyl, trifluoromethyl or halogen; R^2 and R^4 are independently hydrogen, fluoro, chloro, methyl or ethyl;

R³ is hydrogen or fluoro; R⁵ is optionally substituted phenyl; and, X², R⁷ and n are as defined hereinabove.

In another embodiment of the present invention there is provided a method for treating an HIV infection, or preventing an HIV infection, or treating AIDS or ARC, comprising co-administering to a host in need thereof a therapeutically effective amount of a compound of formula I wherein, X¹, X², R¹, R², R³, R⁴, R⁵, R⁶, R⁷ and n are as defined hereinabove, and hydrates, solvates, clathrates and acid addition salts thereof, and at least one compound selected from the group consisting of HIV protease inhibitors, nucleoside reverse transcriptase inhibitors, non-nucleoside reverse transcriptase inhibitors, CCR5 inhibitors and viral fusion inhibitors.

In another embodiment of the present invention there is provided a method for treating an HIV infection, or preventing an HIV infection, or treating AIDS or ARC, comprising co-administering to a host in need thereof a therapeutically effective amount of a compound of formula I wherein, X¹, X², R¹, R², R³, R⁴, R⁵, R⁶, R⁷ and n are as defined hereinabove, and hydrates, solvates, clathrates and acid addition salts thereof, and at least one compound selected from the group consisting of zidovudine, lamivudine, didanosine, zalcitabine, stavudine, rescriptor, sustiva, viramune efavirenz, nevirapine and delavirdine and/or the group consisting of saquinavir, ritonavir, nelfinavir, indinavir, amprenavir and lopinavir.

In another embodiment of the present invention there is provided a method for inhibiting a retrovirus reverse transcriptase comprising administering a compound of formula I wherein, X¹, X², R¹, R², R³, R⁴, R⁵, R⁶, R⁷ and n are as defined hereinabove, and hydrates, solvates, clathrates and acid addition salts thereof.

In another embodiment of the present invention there is provided a method for inhibiting a retrovirus reverse transcriptase having at least one mutation with respect to wild type virus comprising administering to a host in need thereof, a therapeutically effective amount of a compound of formula I wherein, X¹, X², R¹, R², R³, R⁴, R⁵, R⁶, R⁷ and n are as defined hereinabove; and, hydrates, solvates, clathrates; and, acid addition salts thereof.

In another embodiment of the present invention there is provided a method treating an HIV infection, or preventing an HIV infection, or treating AIDS or ARC, wherein the host is infected with a strain of HIV which exhibits reduced susceptibility to efavirenz, nevirapine or delavirdine comprising administering to a host in need thereof a therapeutically effective amount of a compound of formula I wherein, X¹, X², R¹,

$R^2, R^3, R^4, R^5, R^6, R^7$ and n are as defined hereinabove; and, hydrates, solvates, clathrates and acid addition salts thereof.

In another embodiment of the present invention there is provided a pharmaceutical composition comprising a therapeutically effective quantity of a compound of formula I wherein, wherein, $X^1, X^2, R^1, R^2, R^3, R^4, R^5, R^6, R^7$ and n are as defined hereinabove, and hydrates, solvates, clathrates and acid addition salts thereof with the proviso that if X^2 is *ortho*-phenylene, R^5 can not unsubstituted phenyl, in admixture with at least one pharmaceutically acceptable carrier or diluent sufficient upon administration in a single or multiple dose regimen for treating diseases mediated by human immunodeficiency virus inhibit HIV.

In another embodiment of the present invention there is provided a process for preparing a heterocycle of formula I, wherein X^1 is OR^5 or OCH_2R^5 and R^5 is an optionally substituted aryl, or heteroaryl moiety; X^2 is O, S, or NR^7 and R^1-R^4 and R^7 are as defined hereinabove,

(I)

which process comprises the steps of: (i)(a) coupling an aryl compound of formula IIa wherein X^4 is hydrogen, alkoxycarbonyl or CN, with (A) an arylboronic acid or an aryl halide, or (B) an aralkyl halide to produce an ether of formula IIb; and, if X^4 is hydrogen;

(b) (A) brominating the methyl group with N-bromosuccinimide and (B) displacing the bromide ($X^4 = Br$) with sodium cyanide to produce the corresponding nitrile ($X^4 = CN$), and, optionally, (C) hydrolyzing the nitrile to an alkoxycarbonyl ($X^4 = CO_2alkyl$) or an O-alkyl imidate hydrochloride ($X^4 = C(=NH_2^+)OR^5 Cl^-$);

(IIa)

(IIb)

(ii)(A) treating a compound of formula **IIb** (X^4 = alkoxy carbonyl) sequentially with hydrazine hydrate to form the acyl hydrazide (**IIb**; X^4 = CONHNH₂) and, (a) phosgene, or a phosgene equivalent, to produce an oxadiazolone of formula **I** wherein X^2 is O; or, (b) sequentially with an alkyl isocyanate (R^7 NCO) to produce a diacylhydrazone (**IIb**; X^4 = C(=O)NHNHC(=O)NHR⁷) and with base to produce the triazolone **I** (X^2 = NR⁷); or, (B) treating a nitrile of formula **IIb** (X^4 = CN) sequentially (a) with acid and alcohol to produce the O-alkyl imidate hydrochloride (X^4 = C(=NH₂⁺)OR Cl⁻), (b) with O-methylthiocarbazine (NH₂NHC(=S)OMe) to produce **IIb** wherein

X^4 is a methoxythiadiazoline according to formula (III), and (c) with aqueous acid to hydrolyze said methoxythiadiazoline and produce a compound of formula **I** wherein X^2 is S.

In another embodiment of the present invention there is provided a process as described above for preparing a compound of formula **I** wherein X^1 is OR⁵, R⁵ is optionally substituted aryl or heteroaryl and the ether is prepared by coupling an arylboronic acid and a phenol **IIa** in the presence of a Cu(II) salt.

In another embodiment of the present invention there is provided a process as described above for preparing a compound of formula **I** wherein X^1 is OR⁵, R⁵ is optionally substituted aryl or heteroaryl and the ether is prepared by coupling an aryl halide and a phenol **IIa** in the presence of a Cu(I) salt.

In another embodiment of the present invention there is provided a process as described above for preparing a compound of formula **I** wherein X^1 is OCH₂R⁵ or OR⁵, R⁵ is an optionally substituted aryl or heteroaryl moiety and the ether is prepared by coupling an aryl halide or heteroaryl halide further substituted by electron withdrawing groups, or an optionally substituted aralkyl halide and a phenol **IIa**, in the presence of a base.

In another embodiment of the present invention there is provided a process as described above for preparing a compound of formula **I** wherein X^1 is -OCH₂R⁵, R⁵ is optionally substituted aryl and the ether is formed by coupling an alcohol R⁵CH₂OH and **IIa** said coupling catalyzed by an a dialkylazodicarboxylate and triaryl or trialkylphosphine.

In another embodiment of the present invention there is provided a process as described above for preparing an oxadiazolone compound of formula **I** by treating a compound of formula **IIb** wherein X^1 is OR^5 or $-OCH_2R^5$, R^5 is optionally substituted aryl or heteroaryl, X^4 is $C(=O)NHNH_2$ with phosgene.

5 In another embodiment of the present invention there is provided a process as described above for preparing an oxadiazolone compound of formula **I** by treating a compound of formula **IIb** wherein X^1 is OR^5 or $-OCH_2R^5$, R^5 is optionally substituted aryl or heteroaryl, X^4 is $C(=O)NHNH_2$ with carbonyl diimidazole.

10 In another embodiment of the present invention there is provided a process as described above for preparing a triazolone compound of formula **I** by treating a compound of formula **IIb** wherein X^1 is OR^5 or $-OCH_2R^5$, R^5 is optionally substituted aryl, X^4 is $C(=O)NHNH_2$ sequentially with methyl isocyanate or ethyl isocyanate and methanolic sodium hydroxide.

15 In another embodiment of the present invention there is provided a process as described above for preparing a thiadiazolone compound of formula **I** by treating a compound of formula **IIb** wherein X^1 is OR^5 or $-OCH_2R^5$, R^5 is optionally substituted aryl, X^4 is $C(=NH_2^+) Cl^-$ sequentially with hydrazinecarbothioic acid O-methyl ester and aqueous acid.

20 DEFINITIONS

The phrase "a" or "an" entity as used herein refers to one or more of that entity; for example, a compound refers to one or more compounds or at least one compound. As such, the terms "a" (or "an"), "one or more", and "at least one" can be used interchangeably herein.

25 The phrase "as defined hereinabove" refers to the first definition provided in the Summary of the Invention.

The term " C_{1-6} alkyl" as used herein denotes an unbranched or branched chain, saturated, monovalent hydrocarbon residue containing 1 to 6 carbon atoms. Examples of alkyl groups include, but are not
30 limited to, lower alkyl groups include methyl, ethyl, propyl, *i*-propyl, *n*-butyl, *i*-butyl, *t*-butyl or pentyl, isopentyl, neopentyl, hexyl.

The term "haloalkyl" as used herein denotes an unbranched or branched chain alkyl group as defined above wherein 1, 2, 3 or more hydrogen atoms are substituted by a halogen. Examples are 1-fluoromethyl,

1-chloromethyl, 1-bromomethyl, 1-iodomethyl, trifluoromethyl, trichloromethyl, tribromomethyl, triiodomethyl, 1-fluoroethyl, 1-chloroethyl, 1-bromoethyl, 1-iodoethyl, 2-fluoroethyl, 2-chloroethyl, 2-bromoethyl, 2-iodoethyl, 2,2-dichloroethyl, 3-bromopropyl or 2,2,2-trifluoroethyl.

- 5 The term "cycloalkyl" as used herein denotes a saturated carbocyclic ring containing 3 to 8 carbon atoms, i.e. cyclopropyl, cyclobutyl, cyclopentyl, cyclohexyl, cycloheptyl or cyclooctyl.

The term "aryl" as used herein means a monocyclic or polycyclic-aromatic group comprising carbon and hydrogen atoms. Examples of suitable aryl groups include, but are not limited to, phenyl, tolyl, indenyl,
10 and 1- or 2-naphthyl, as well as benzo-fused carbocyclic moieties such as 5,6,7,8-tetrahydronaphthyl. An aryl group can be unsubstituted or substituted with one or more suitable substituents which substituents include C₁₋₆ alkyl, C₁₋₆ haloalkyl, C₃₋₈ cycloalkyl, C₁₋₆ alkoxy, C₁₋₆ alkylthio, C₁₋₆ alkylsulfinyl, C₁₋₆ alkylsulfonyl, C₁₋₆ haloalkoxy, C₁₋₆ haloalkylthio, halogen, amino, alkylamino, dialkylamino, aminoacyl, acyl, alkoxycarbonyl, carbamoyl, N-alkylcarbamoyl, N,N-dialkylcarbamoyl, nitro and cyano.

15

A "heteroaryl group" or "heteroaromatic" as used herein means a monocyclic- or polycyclic aromatic ring comprising 15 carbon atoms, hydrogen atoms, and one or more heteroatoms, preferably, 1 to 3 heteroatoms, independently selected from nitrogen, oxygen, and sulfur. As well known to those skilled in the art, heteroaryl rings have less aromatic character than their all-carbon counter parts. Thus, for the
20 purposes of the invention, a heteroaryl group need only have some degree of aromatic character. Illustrative examples of heteroaryl groups include, but are not limited to, pyridinyl, pyridazinyl, pyrimidyl, pyrazyl, triazinyl, pyrrolyl, pyrazolyl, imidazolyl, (1,2,3)- and (1,2,4)-triazolyl, pyrazinyl, pyrimidinyl, tetrazolyl, furyl, thienyl, isoxazolyl, thiazolyl, thienyl, isoxazolyl, indolyl, quinolinyl, and oxazolyl. A heteroaryl group can be unsubstituted or substituted with one or more suitable substituents
25 selected from hydroxy, oxo, cyano, alkyl, alkoxy, haloalkoxy, alkylthio, halo, haloalkyl, nitro, alkoxycarbonyl, amino, alkylamino, dialkylamino, aminoacyl, alkylsulfonyl, arylsulfinyl, alkoxycarbonyl, carbamoyl, N-alkylcarbamoyl, N,N-dialkylcarbamoyl, acyl unless otherwise indicated. A nitrogen atom in the heteroaryl ring can optionally be an N-oxide.

- 30 The term "heterocyclyl" means the monovalent saturated cyclic radical, consisting of one or more rings, preferably one to two rings, of three to eight atoms per ring, incorporating one or more ring heteroatoms (chosen from N, O or S(O)_{0.2}), and which can optionally be substituted with one or more, preferably one to three substituents selected from hydroxy, oxo, cyano, alkyl, alkoxy, haloalkoxy, alkylthio, halo, haloalkyl, nitro, alkoxycarbonyl, amino, alkylamino, dialkylamino, aminoacyl, alkylsulfonyl, arylsulfinyl,

alkoxycarbonyl, carbamoyl, N-alkylcarbamoyl, N,N-dialkylcarbamoyl, acyl unless otherwise indicated. Examples of heterocyclic radicals include, but are not limited to, furanyl, tetrahydropyranyl, tetrahydrothiophenyl and the like.

- 5 The term "alkoxy group" as used herein means an -O-alkyl group, wherein alkyl is as defined above such as methoxy, ethoxy, *n*-propyloxy, *i*-propyloxy, *n*-butyloxy, *i*-butyloxy, *t*-butyloxy, pentyloxy, hexyloxy, heptyloxy including their isomers.

- The term "alkylthio group" as used herein means an -S-alkyl group, wherein alkyl is as defined above
10 such as meththio, eththio, *n*-propylthio, *i*-propylthio, *n*-butylthio, *i*-butylthio, *t*-butylthio, pentylthio including their isomers.

- The term "haloalkoxy group" as used herein means an -O-haloalkyl group, wherein haloalkyl is as defined above. Examples of haloalkoxy groups include, but are not limited to, 2,2,2-trifluoroethoxy, .
15 difluoromethoxy and 1,1,1,3,3,3-hexafluoro-*iso*-propoxy.

The term "haloalkthio group" as used herein means an -S-haloalkyl group, wherein haloalkyl is as defined above. An example of haloalkthio groups includes, but are not limited to, 2,2,2-trifluoroethanthiol.

- 20 The term "aryloxy group" as used herein means an O-aryl group wherein aryl is as defined above. An aryloxy group can be unsubstituted or substituted with one or more suitable substituents. Preferably, the aryl ring of an aryloxy group is a monocyclic ring, wherein the ring comprises 6 carbon atoms, referred to herein as "(C₆) aryloxy". The term "optionally substituted aryloxy" means the aryl or group may be substituted with one to three groups selected from the group consisting of C₁₋₆ alkyl, C₁₋₆ haloalkyl, C₃₋₈
25 cycloalkyl, C₁₋₆ alkoxy, C₁₋₆ alkylthio, C₁₋₆ alkylsulfinyl, C₁₋₆ alkylsulfonyl, C₁₋₆ haloalkoxy, C₁₋₆ haloalkylthio, halogen, amino, alkylamino, dialkylamino, aminoacyl, acyl, alkoxycarbonyl, carbamoyl, N-alkylcarbamoyl, N,N-dialkylcarbamoyl, nitro and cyano.

- The term "heteroaryloxy group" as used herein means an O-heteroaryl group, wherein heteroaryl is as
30 defined above. The heteroaryl ring of a heteroaryloxy group can be unsubstituted or substituted with one or more suitable substituents. Examples of heteroaryl groups include, but are not limited to, 2-pyridyloxy, 3-pyrrolyloxy, 3-pyrazolyloxy, 2-imidazolyloxy, 3-pyrazinyloxy, and 4-pyrimidyloxy.

The term "acyl" or "alkylcarbonyl" as used herein denotes a radical of formula $C(=O)R$ wherein R is hydrogen, unbranched or branched alkyl containing 1 to 6 carbon atoms or a phenyl group.

5 The term "alkoxycarbonyl" as used herein denotes a radical of formula $C(=O)OR$ wherein R is, unbranched or branched alkyl as described above.

The term "acylamino" as used herein denotes a radical of formula $-NH-(acyl)$ where acyl is as defined herein.

10 The term "arylboronic acid" as used herein denotes a radical of formula $ArB(OH)_2$ wherein Ar is an optionally substituted aryl group as described above.

The term "alkylene" as used herein denotes a divalent linear or branched saturated hydrocarbon radical, having from one to six carbons inclusive, unless otherwise indicated. Examples of alkylene radicals
15 include, but are not limited to, methylene, ethylene, propylene, 2-methyl-propylene, butylene, 2-ethylbutylene.

The term "arylalkyl" or "aralkyl" as used herein denotes the radical $R'R''$ -, wherein R' is an aryl radical as defined herein, and R'' is an alkylene radical as defined herein and the arylalkyl group is attached through
20 the alkylene radical. Examples of arylalkyl radicals include, but are not limited to, benzyl, phenylethyl, 3-phenylpropyl.

The term "halogen" as used herein means fluorine, chlorine, bromine, or iodine. Correspondingly, the meaning of the term "halo" encompasses fluoro, chloro, bromo, and iodo. The term "hydrohalic acid"
25 refers to an acid comprised of hydrogen and a halogen.

The term "alkylsulfinyl" as used herein means the radical $-S(O)R'$, wherein R' is alkyl as defined herein. Examples of alkylaminosulfonyl include, but are not limited to methylsulfinyl and *iso*-propylsulfinyl.

30 The term "alkylsulfonyl" as used herein means the radical $-S(O)_2R'$, wherein R' is alkyl as defined herein. Examples of alkylaminosulfonyl include, but are not limited to methylsulfonyl and *iso*-propylsulfonyl.

The terms "amino", "alkylamino" and "dialkylamino" as used herein refer to $-NH_2$, $-NHR$ and $-NR_2$ respectively and R is alkyl as defined above. The two alkyl groups attached to a nitrogen in a dialkyl

moiety can be the same or different. The terms "aminoalkyl", "alkylaminoalkyl" and "dialkylaminoalkyl" as used herein refer to $\text{NH}_2(\text{CH}_2)_n$ -, $\text{RHN}(\text{CH}_2)_n$ -, and $\text{R}_2\text{N}(\text{CH}_2)_n$ - respectively wherein n is 1 to 6 and R is alkyl as defined above

- 5 The prefix "carbamoyl" as used herein means the radical $-\text{CONH}_2$. The prefix "N-alkylcabamoyl" and "N,N-dialkylcarbamoyl" means a radical CONHR' or $\text{CONR}'\text{R}''$ respectively wherein the R' and R'' groups are independently alkyl as defined herein.

10 The term "conjugate base" as used herein means the chemical species produced when an acid (including here a carbon acid) gives up its proton.

Compounds of formula I exhibit tautomerism. Tautomeric compounds can exist as two or more interconvertable species. Prototropic tautomers result from the migration of a covalently bonded hydrogen atom between two atoms. Tautomers generally exist in equilibrium and attempts to isolate an individual tautomers usually produce a mixture whose chemical and physical properties are consistent with a mixture of compounds. The position of the equilibrium is dependent on chemical features within the molecule. For example, in many aliphatic aldehydes and ketones, such as acetaldehyde, the keto form predominates while; in phenols, the enol form predominates. Common prototropic tautomers include keto/enol ($-\text{C}(=\text{O})-\text{CH}- \rightleftharpoons -\text{C}(\text{OH})=\text{CH}-$), amide/imidic acid ($-\text{C}(=\text{O})-\text{NH}- \rightleftharpoons -\text{C}(\text{OH})=\text{N}-$) and amidine ($-\text{C}(=\text{NR})-\text{NH}- \rightleftharpoons -\text{C}(\text{NHR})=\text{N}-$) tautomers. The latter two are particularly common in heteroaryl and heterocyclic rings and the present invention encompasses all tautomeric forms of the compounds.

Compounds of formula I which are basic can form pharmaceutically acceptable acid addition salts with inorganic acids such as hydrohalic acids (e.g. hydrochloric acid and hydrobromic acid), sulphuric acid, nitric acid and phosphoric acid, and the like, and with organic acids (e.g. with acetic acid, tartaric acid, succinic acid, fumaric acid, maleic acid, malic acid, salicylic acid, citric acid, methanesulphonic acid and *p*-toluenesulfonic acid, and the like).

The term "solvate" as used herein means a compound of the invention or a salt, thereof, that further includes a stoichiometric or non-stoichiometric amount of a solvent bound by non-covalent intermolecular forces. Preferred solvents are volatile, non-toxic, and/or acceptable for administration to humans in trace amounts.

The term "hydrate" as used herein means a compound of the invention or a salt thereof, that further includes a stoichiometric or non-stoichiometric amount of water bound by non-covalent intermolecular forces.

- 5 The term "clathrate" as used herein means a compound of the invention or a salt thereof in the form of a crystal lattice that contains spaces (e. g., channels) that have a guest molecule (e. g., a solvent or water) trapped within.

- 10 The term "nucleoside and nucleotide reverse transcriptase inhibitors" ("NRTI"s) as used herein means nucleosides and nucleotides and analogues thereof that inhibit the activity of HIV-1 reverse transcriptase, the enzyme which catalyzes the conversion of viral genomic HIV-1 RNA into proviral HIV-1 DNA.

- Typical suitable NRTIs include zidovudine (AZT) available under the RETROVIR tradename; didanosine (ddI) available under the VIDEX tradename.; zalcitabine (ddC) available under the HIVID tradename;
15 stavudine (d4T) available under the ZERIT trademark.; lamivudine (3TC) available under the EPIVIR tradename; abacavir (1592U89) disclosed in WO96/30025 and available under the ZIAGEN trademark; adefovir dipivoxil [bis(POM)-PMEA] available under the PREVON tradename; lobucavir (BMS-180194), a nucleoside reverse transcriptase inhibitor disclosed in EP-0358154 and EP-0736533 and under development by Bristol-Myers Squibb; BCH-10652, a reverse transcriptase inhibitor (in the form of a
20 racemic mixture of BCH-10618 and BCH-10619) under development by Biochem Pharma; emitricitabine [(-)-FTC] licensed from Emory University under U.S. Pat. No. 5,814,639 and under development by Triangle Pharmaceuticals; beta-L-FD4 (also called beta-L-D4C and named beta-L-2', 3'-dicleoxy-5-fluoro-cytidine) licensed by Yale University to Vion Pharmaceuticals; DAPD, the purine nucleoside, (-)-beta-D-2,6,-diamino-purine dioxolane disclosed in EP-0656778 and licensed to Triangle
25 Pharmaceuticals; and lodenosine (FddA), 9-(2,3-dideoxy-2-fluoro-b-D-threo-pentofuranosyl)adenine, an acid stable purine-based reverse transcriptase inhibitor discovered by the NIH and under development by U.S. Bioscience Inc..

- 30 The term "non-nucleoside reverse transcriptase inhibitors" ("NNRTI"s) as used herein means non-nucleosides that inhibit the activity of HIV-1 reverse transcriptase.

Typical suitable NNRTIs include nevirapine (BI-RG-587) available under the VIRAMUNE tradename; delaviradine (BHAP, U-90152) available under the RESCRIPTOR tradename; efavirenz (DMP-266) a benzoxazin-2-one disclosed in WO94/03440 and available under the SUSTIVA tradename; PNU-142721,

a furopyridine-thio-pyrimide; AG-1549 (formerly Shionogi # S-1153); 5-(3,5-dichlorophenyl)-thio-4-isopropyl-1-(4-pyridyl)methyl-1H-imidazol-2-ylmethyl carbonate disclosed in WO 96/10019; MKC-442 (1-(ethoxy-methyl)-5-(1-methylethyl)-6-(phenylmethyl)-(2,4(1H,3H)-pyrimidinedione); and (+)-calanolide A (NSC-675451) and B, coumarin derivatives disclosed in U.S. Pat. No. 5,489,697

5

The term "protease inhibitor" ("PI") as used herein means inhibitors of the HIV-1 protease, an enzyme required for the proteolytic cleavage of viral polyprotein precursors (e.g., viral GAG and GAG Pol polyproteins), into the individual functional proteins found in infectious HIV-1. HIV protease inhibitors include compounds having a peptidomimetic structure, high molecular weight (7600 daltons) and substantial peptide character, e.g. CRIXIVAN as well as nonpeptide protease inhibitors e.g., VIRACEPT.

10

Typical suitable PIs include saquinavir available in hard gel capsules under the INVIRASE tradename and as soft gel capsules under the FORTOVASE tradename; ritonavir (ABT-538) available under the NORVIR tradename; indinavir (MK-639) available under the CRIXIVAN tradename; nelfinavir (AG-1343) available under the VIRACEPT; amprenavir (141W94), tradename AGENERASE, a non-peptide protease inhibitor; lasinavir (BMS-234475; originally discovered by Novartis, Basel, Switzerland (CGP-61755); DMP-450, a cyclic urea discovered by Dupont; BMS-2322623, an azapeptide under development by Bristol-Myers Squibb, as a 2nd-generation HIV-1 PI; ABT-378; AG-1549 an orally active imidazole carbamate.

20

Other antiviral agents include hydroxyurea, ribavirin, IL-2, IL-12, pentafuside and Yisum Project No. 11607. Hydroxyurea (Droxia), a ribonucleoside triphosphate reductase inhibitor, the enzyme involved in the activation of T-cells. Hydroxyurea was shown to have a synergistic effect on the activity of didanosine and has been studied with stavudine. IL-2 is disclosed in Ajinomoto EP-0142268, Takeda EP-0176299, and Chiron U.S. Pat. Nos. RE 33,653, 4,530,787, 4,569,790, 4,604,377, 4,748,234, 4,752,585, and 4,949,314, and is available under the PROLEUKIN (aldesleukin) tradename as a lyophilized powder for IV infusion or sc administration upon reconstitution and dilution with water; a dose of about 1 to about 20 million IU/day, sc is preferred; a dose of about 15 million IU/day, sc is more preferred. IL-12 is disclosed in WO96/25171 and is available as a dose of about 0.5 microgram/kg/day to about 10 microgram/kg/day, sc is preferred. Pentafuside (DP-178, T-20) a 36-amino acid synthetic peptide, disclosed in U.S. Pat. No. 5,464,933 and available under the FUZEON tradename; pentafuside acts by inhibiting fusion of HIV-1 to target membranes. Pentafuside (3-100 mg/day) is given as a continuous sc infusion or injection together with efavirenz and 2 PI's to HIV-1 positive patients refractory to a triple combination therapy; use of 100 mg/day is preferred. Yisum Project No. 11607, a synthetic protein

30

based on the HIV-1 Vif protein. Ribavirin, 1-.beta.-D-ribofuranosyl-1H-1,2,4-triazole-3-carboxamide, is described in U.S. Pat. No. 4,211,771.

The term "anti-HIV-1 therapy" as used herein means any anti-HIV-1 drug found useful for treating HIV-1 infections in man alone, or as part of multidrug combination therapies, especially the HAART triple and quadruple combination therapies. Typical suitable known anti-HIV-1 therapies include, but are not limited to multidrug combination therapies such as (i) at least three anti-HIV-1 drugs selected from two NRTIs, one PI, a second PI, and one NNRTI; and (ii) at least two anti-HIV-1 drugs selected from NNRTIs and PIs. Typical suitable HAART--multidrug combination therapies include:

(a) triple combination therapies such as two NRTIs and one PI; or (b) two NRTIs and one NNRTI; and (c) quadruple combination therapies such as two NRTIs, one PI and a second PI or one NNRTI. In treatment of naive patients, it is preferred to start anti-HIV-1 treatment with the triple combination therapy; the use of two NRTIs and one PI is preferred unless there is intolerance to PIs. Drug compliance is essential. The CD4^{sup.} and HIV-1-RNA plasma levels should be monitored every 3-6 months. Should viral load plateau, a fourth drug, e.g., one PI or one NNRTI could be added.

The term "wild type" as used herein refers to the HIV virus strain which possesses the dominant genotype which naturally occurs in the normal population which has not been exposed to reverse transcriptase inhibitors. The term "wild type reverse transcriptase" used herein has refers to the reverse transcriptase expressed by the wild type strain which has been sequenced and deposited in the SwissProt database with an accession number P03366.

The term "reduced susceptibility" as used herein refers to about a 10 fold, or greater, change in sensitivity of a particular viral isolate compared to the sensitivity exhibited by the wild type virus in the same experimental system

ABBREVIATIONS

The following abbreviations are used throughout this application and they have the meaning listed below:

	AIBN	azo- <i>bis</i> -isobutyronitrile
	atm	atmospheres
5	BBN or 9-BBN	9-borabicyclo[3.3.1]nonane
	Boc	<i>tert</i> -butoxycarbonyl
	BOC ₂ O	Di- <i>tert</i> -butyl pyrocarbonate or boc anhydride
	Bn	benzyl
	cbz or Z	benzyloxycarbonyl
10	DABCO	diazabicyclooctane
	DAST	diethylaminosulfur trifluoride
	DCE	1,2-dichloroethane
	DCM	dichloromethane
	DEAD	diethyl azodicarboxylate
15	DIAD	di- <i>iso</i> -propylazodicarboxylate
	DIBAL-H	di- <i>iso</i> -butylaluminumhydride
	DMA	N,N-dimethyl acetamide
	DMAP	4-N,N-dimethylaminopyridine
	DMF	N,N-dimethylformamide
20	dppf	1,1'-Bis(diphenylphosphino)ferrocene
	EDCI	1-(3-dimethylaminopropyl)-3-ethylcarbodiimide hydrochloride
	EtOAc	ethyl acetate
	Et ₂ O	diethyl ether
	Et	ethyl
25	EtOH	ethanol
	LAH	lithium aluminum hydride
	LiHMDS	lithium hexamethyl disilazane
	h	hour(s)
	HOAc	acetic acid
30	<i>i</i> -Pr	iso-propyl
	m	minute(s)
	Me	methyl
	MeCN	acetonitrile
	MeOH	methanol

	MTBE	methyl <i>t</i> -butyl ether
	NBS	N-bromosuccinimide
	NMP	N-methylpyrrolidone
	PCC	pyridinium chlorochromate
5	PDC	pyridinium dichromate
	psi	pounds per square inch
	pyr	pyridine
	rt or RT	room temperature
	TEA or Et ₃ N	triethylamine
10	Tf	triflate CF ₃ SO ₂ -
	TFA	trifluoroacetic acid
	THF	tetrahydrofuran
	TLC	thin layer chromatography
	TMHD	2,2,6,6-tetramethylheptane-2,6-dione
15	TsOH	<i>p</i> -toluenesulfonic acid

EXAMPLES OF COMPOUNDS

representative examples of [3-phenoxybenzyl]pyridazinones within the scope of the invention are provided in the following table. These examples and preparations are provided to enable those skilled in the art to more clearly understand and to practice the present invention. In general, the nomenclature used in this Application is based on AUTONOMTM v.4.0, a Beilstein Institute computerized system for the generation of IUPAC systematic nomenclature. If there is a discrepancy between a depicted structure and a name given that structure, the depicted structure is to be accorded more weight.

Table I			
cpd #	Structure	Name	[M+H] ⁺ (mw) mp
I-1		5-(4-Chloro-3-phenoxy-benzyl)-3H-[1,3,4]oxadiazol-2-one	(302.7195)
I-2		5-[4-Chloro-3-(2-chloro-phenoxy)-benzyl]-3H-[1,3,4]oxadiazol-2-one	(337.1646)

Table I			
cpd #	Structure	Name	[M+H] ⁺ (mw) mp
I-3		5-[3-(3-Bromo-phenoxy)-4-chloro-benzyl]-3H-[1,3,4]oxadiazol-2-one	(381.6156)
I-4		5-[4-Chloro-3-(2-chloro-phenoxy)-benzyl]-3H-[1,3,4]thiadiazol-2-one	(353.2292)
I-5		5-[3-(3-Bromo-phenoxy)-4-chloro-benzyl]-3H-[1,3,4]thiadiazol-2-one	(397.6802)
I-6		5-[3-(3-Bromo-phenoxy)-4-chloro-benzyl]-4-ethyl-2,4-dihydro-[1,2,4]triazol-3-one	408 (408.685)
I-7		5-[4-Chloro-3-(2-chloro-phenoxy)-benzyl]-4-ethyl-2,4-dihydro-[1,2,4]triazol-3-one	364 (364.234)
I-8		5-[4-Chloro-3-(3-chloro-phenoxy)-benzyl]-4-methyl-2,4-dihydro-[1,2,4]triazol-3-one	350 (350.2069)
I-9		5-[4-Chloro-3-(3-chloro-phenoxy)-benzyl]-4-ethyl-2,4-dihydro-[1,2,4]triazol-3-one	364 (364.23)
I-10		5-[4-Chloro-3-(3-chloro-phenoxy)-benzyl]-4-propyl-2,4-dihydro-[1,2,4]triazol-3-one	378 (378.26)
I-11		5-[3-(3-Bromo-phenoxy)-4-chloro-benzyl]-4-methyl-2,4-dihydro-[1,2,4]triazol-3-one	394 (394.65)

Table I			
cpd #	Structure	Name	[M+H] ⁺ (mw) mp
I-12		5-[3-(3-Bromo-phenoxy)-4-methyl-benzyl]-4-methyl-2,4-dihydro-[1,2,4]triazol-3-one	374 (374.23)
I-13		5-[4-Chloro-3-(3,5-dibromo-phenoxy)-benzyl]-4-methyl-2,4-dihydro-[1,2,4]triazol-3-one	473.55 (474)
I-14		5-[4-Chloro-3-(3,5-dichloro-phenoxy)-benzyl]-4-methyl-2,4-dihydro-[1,2,4]triazol-3-one	402.64 (404)
I-15		5-[3-(5-Bromo-2-chloro-phenoxy)-4-chloro-benzyl]-4-methyl-2,4-dihydro-[1,2,4]triazol-3-one	430 (429.1)
I-16		4-Chloro-3-[2-chloro-5-(4-methyl-5-oxo-4,5-dihydro-1H-[1,2,4]triazol-3-ylmethyl)-phenoxy]-benzonitrile	375 (375.21)
I-17		3-[2-Chloro-5-(4-methyl-5-oxo-4,5-dihydro-1H-[1,2,4]triazol-3-ylmethyl)-phenoxy]-benzonitrile	341 (340.77)
I-18		3-[2-Methyl-5-(4-methyl-5-oxo-4,5-dihydro-1H-[1,2,4]triazol-3-ylmethyl)-phenoxy]-benzonitrile	321 (320.35)
I-19		5-[2-Chloro-5-(4-methyl-5-oxo-4,5-dihydro-1H-[1,2,4]triazol-3-ylmethyl)-phenoxy]-isophthalonitrile	366 (365.78) 217.8-219.1
I-20		5-[4-Chloro-3-(3-chloro-phenoxy)-benzyl]-4-phenyl-2,4-dihydro-[1,2,4]triazol-3-one	412 (412.27)

Table I			
cpd #	Structure	Name	[M+H] ⁺ (mw) mp
I-21		4-Chloro-3-[6-chloro-2-fluoro-3-(4-methyl-5-oxo-4,5-dihydro-1H-[1,2,4] triazol-3-ylmethyl)-phenoxy]-benzonitrile	393 (393.2)
I-22		3-Chloro-5-[6-chloro-2-fluoro-3-(4-methyl-5-oxo-4,5-dihydro-1H-[1,2,4] triazol-3-ylmethyl)-phenoxy]-benzonitrile	447 (447.09) 167.8-171.2
I-23		5-[3-(3-Bromo-5-chloro-phenoxy)-4-chloro-2-fluoro-benzyl]-4-methyl-2,4-dihydro-[1,2,4]triazol-3-one	447 (447.09) 212.3-215.8
I-24		3-Chloro-5-[6-chloro-2-methoxy-3-(4-methyl-5-oxo-4,5-dihydro-1H-[1,2,4] triazol-3-ylmethyl)-phenoxy]-benzonitrile	405 (405.24) 194.4-198.6
I-25		3-Chloro-5-[6-chloro-2-hydroxy-3-(4-methyl-5-oxo-4,5-dihydro-1H-[1,2,4] triazol-3-ylmethyl)-phenoxy]-benzonitrile	391 (391.21) 185-186.2
I-26		5-[4-Chloro-3-(3-chloro-5-difluoromethyl-phenoxy)-2-fluoro-benzyl]-4-methyl-2,4-dihydro-[1,2,4]triazol-3-one	461 (461) 180.6-185.2
I-27		3-[6-Chloro-2-fluoro-3-(4-methyl-5-oxo-4,5-dihydro-1H-[1,2,4]triazol-3-ylmethyl)-phenoxy]-5-difluoromethyl-benzonitrile	408 (408.77) 190.7-192.8
I-28		3-[6-Bromo-2-fluoro-3-(4-methyl-5-oxo-4,5-dihydro-1H-[1,2,4]triazol-3-ylmethyl)-phenoxy]-5-chloro-benzonitrile	436 (437.66) 188-190

Table I			
cpd #	Structure	Name	[M+H] ⁺ (mw) mp

PREPARATION OF COMPOUNDS OF THE INVENTION

Compounds of the present invention can be made by a variety of methods depicted in the illustrative synthetic reaction schemes shown and described below. The starting materials and reagents used in preparing these compounds generally are either available from commercial suppliers, such as Aldrich Chemical Co., or are prepared by methods known to those skilled in the art following procedures set forth in references such as *Fieser and Fieser's Reagents for Organic Synthesis*; Wiley & Sons: New York, Volumes 1-21; R. C. LaRock, *Comprehensive Organic Transformations*, 2nd edition Wiley-VCH, New York 1999; *Comprehensive Organic Synthesis*, B. Trost and I. Fleming (Eds.) vol. 1-9 Pergamon, Oxford, 1991; *Comprehensive Heterocyclic Chemistry*, A. R. Katritzky and C. W. Rees (Eds) Pergamon, Oxford 1984, vol. 1-9; *Comprehensive Heterocyclic Chemistry II*, A. R. Katritzky and C. W. Rees (Eds) Pergamon, Oxford 1996, vol. 1-11; and *Organic Reactions*, Wiley & Sons: New York, 1991, Volumes 1-40. The following synthetic reaction schemes and examples are merely illustrative of some methods by which the compounds of the present invention can be synthesized, and various modifications to these synthetic reaction schemes can be made and will be suggested to one skilled in the art having referred to the disclosure contained in this Application.

The heterocyclic compounds of the present invention are prepared by a two-stage process (Scheme 1) comprising construction of an appropriately substituted aryl ring **2** and subsequently introducing the heterocyclic ring **3**. Although stages can be accomplished in any order, the heterocyclic ring is generally introduced after the modifications of the aryl ring are completed. Substituted alkyl *m*-hydroxyphenylacetate **1a** or *m*-hydroxyphenylacetonitrile **1b** derivatives are convenient starting materials. They are often commercially available or readily prepared from commercially available precursors. Alternatively the aryl ring may be substituted with a methyl **1c** or carboxylic acid ester **1d** substituent which is subsequently converted to **1b** (for example, see schemes 4 and 5). One skilled in the art will also appreciate the substituents can altered after introduction of the heterocyclic ring.

SCHEME 1

Preparation of Phenylacetic Acid and Phenylacetone Precursors (Scheme 1)

- 5 Ethyl 3-hydroxy-4-methylphenylacetate (**5a**) was prepared from ethyl 3-methoxy-4-hydroxyphenylacetate as shown in Scheme 2. The phenol was converted to the triflate ester **4b** which was subjected to displacement with Me₂Zn, DIBAL-H and PdCl₂(dppf) (E.-i. Negishi in *Metal-catalyzed Cross-Coupling Reactions*, F. Diederich and P. J. Stang (eds.), Wiley-VCH, Mannheim 1998, chap.1; E. Erdik, *Tetrahedron* **1992** 48:9577-9648) to afford the **4c**. Boron tribromide demethylation afforded **5a**.
- 10 Ethyl 3-hydroxy-4-ethylphenylacetate **5b** was prepared by Friedel-Crafts acylation of **4d** which afforded ethyl 4-acetyl-3-methoxyphenylacetate (**4e**). Reduction of the ketone with triethylsilane and TFA produced the corresponding 4-ethyl substituted derivative **4f** which was demethylated with BBr₃ to afford **5b**. Ethyl 3-hydroxy-4-*iso*-propylphenylacetate (**5c**) was prepared by Wittig olefination of **4e** and subsequent catalytic hydrogenation of the 2-propenyl substituent to yield **4h**. Demethylation with boron tribromide produced **5c**.
- 15

SCHEME 2

- Ethyl 3,4-dimethyl-5-hydroxyphenylacetate (**8**) was prepared by formylation of **6a** and esterification of the resulting carboxylic acid **6b** to produce ethyl 3-formyl-4-hydroxy-5-methoxyphenyl acetate (**7a**). Reduction of the aldehyde and hydrogenolysis the resulting benzyl alcohol afforded **7b**. The second methyl substituent was introduced by sequential treatment of **7b** with triflic anhydride which yielded **7c** and displacement with Me₂Zn, PdCl₂(dppf) and DIBAL-H (*supra*) to produce **7c**. Boron tribromide mediated demethylation afforded **8**. (Scheme 3)

SCHEME 3

- Ethyl 4-chloro-3-hydroxyphenyl acetate (**10**) was prepared from 4-chloro-3-methoxytoluene by sequential free radical bromination (**9b**), nucleophilic displacement of the bromine atom with cyanide (**9c**) and a

two-step hydrolysis of the nitrile to the amidine hydrochloride **9d** and subsequently to the ethyl ester **9e**. Boron tribromide mediated demethylation as described previously afforded **10**. (Scheme 4)

SCHEME 4

(a) NBS, benzoyl peroxide, CCl₄; (b) NaCN, 90% EtOH; (c) HCl, EtOH, Et₂O; (d) H₂O, 40 °C; (e) BBr₃, CH₂Cl₂, -78 °C

6-Methyl derivatives were prepared from 3-hydroxy-2-methylbenzoic acid (**11**) which was chlorinated (NaOCl/NaOH) and esterified to afford **13**. Cupric acetate mediated coupling (*infra*) of benzenboronic acid provided the diaryl ether **14**. The nitrile was introduced by sequential reduction, mesylation and cyanide displacement to afford **17**. The mesylate underwent an *in situ* displacement by chloride during the mesylation reaction.

10

6- fluoro- and chloro- derivatives were available from 6-chloro-2-fluoro-3-methylphenol (**18**) and 3-bromo-2,4-dichlorotoluene (**19**), respectively (Scheme 6). The base-catalyzed reaction of **18** and *p*-fluoro-nitrobenzene yielded diaryl ether **20**. Conversion of the nitro substituent to the corresponding

amine followed by diazotization and reduction produced 4-chloro-2-fluoro-3-phenoxytoluene (**22**). One skilled in the art will appreciate that the availability of amino-substituted aryl groups affords the possibility to replace the amino substituent with a variety of other substituents utilizing the Sandmeyer reaction. Cupric chloride-mediated coupling (see *infra*) of **19** afforded the corresponding 2,4-dichloro-3-phenoxytoluene (**23**). Elaboration of the acetonitrile sidechain in **24** and **25** was accomplished by benzylic bromination and displacement.

Benzofuran **31** and dihydrobenzofuran **29** derivatives (Scheme 7) were prepared from dihydrobenzofuran (**26**). Acylation with ethyl chloro oxalate produced the α-ketoester **27** which was reduced to the corresponding phenylacetic acid derivative **28a** under Wolff-Kischner conditions. The preparation of **29** by a Wilgerodt reaction also has been reported (J. Dunn *et al. J. Med Chem* **1986** 29:2326). Freidel-Crafts acylation with acetyl chloride afforded the acetyl derivative **28b** which was converted to the acetate **28c** under Baeyer-Villiger conditions and subsequently hydrolyzed to **29**. The corresponding benzofuran analogs were prepared by benzylic bromination and concomitant dehydrohalogenation to yield **31**.

Preparation of Aryl Ether Intermediates (Scheme 1; 2; X = O or S)

The preparation of diaryl ethers has been reviewed (J. S. Sawyer, *Recent Advances in Diaryl Ether Synthesis, Tetrahedron* **2000** 56:5045-5065). The diaryl ethers required herein were prepared by three different methods (Scheme 8): (i) Cu(OAc)₂ catalyzed condensation of substituted benzene boronic acids and phenols (D. A. Evans *et al.*, *Synthesis of Diaryl Ethers through the Copper-Promoted Arylation of Phenols with Aryl Boronic Acids. An Expedient Synthesis of Thyroxine, Tetrahedron Lett.*, **1998** 39:2937-2940 and D. M. T. Chan *et al.*, *New N- and O-Arylations with Phenylboronic Acids and Cupric Acetate, Tetrahedron Lett.* **1998** 39:2933-2936; Scheme 1, conditions (a), (b), (e), (f), (i); (ii) by variations of the Ullmann diaryl ether synthesis with Cu(I) salts (J.-F. Marcoux *et al.*, *A General Copper-Catalyzed Synthesis of Diaryl Ethers, J. Am. Chem. Soc.* **1997** 119:10539-540; E. Buck *et al.*, *Ullmann Diaryl Ether Synthesis: Rate Acceleration by 2,2,6,6-tetramethylheptane-3,5-dione, Org. Lett.* **2002** 4(9):1623-1626); conditions (c), (d) and (h); or by nucleophilic aromatic displacement reactions (Sawyer *supra* pp 5047-5059; conditions Scheme 1(g) and (j)). An alternative process utilizing palladium-catalyzed coupling procedures also has been reported (G. Mann *et al.*, *Palladium-Catalyzed Coupling Involving Unactivated Aryl Halides. Sterically Induced Reductive Elimination to Form the C-O Bond in Diaryl Ethers, J. Am. Chem. Soc.*, **1999** 121:3224-3225). One skilled in the art will appreciate that optimal procedure will vary depending on the nature and position of substituents on the aryl rings.

Substituted *m*-cresol derivatives are also suitable substrates for coupling using these procedures. After introduction of the *meta* substituent the intermediate can be converted to the corresponding phenylacetonitrile derivative by bromination and cyanide displacement (Scheme 9).

SCHEME 9

coupling of compounds with a fused aryl, heteroaryl or heterocyclic ring to produce diaryl ethers, alkylaryl ethers or arylaralkylethers can be carried out by the same procedures. The preparation of

5 aralkyloxy benzofuranylacetate and aryloxydihydrobenzofuranylacetate derivatives is exemplified in Scheme 10. Aralkoxybenzofurans are prepared by Mitsunobu coupling of the alcohol and the hydroxybenzofuranacetic acid.

SCHEME 10

(a) 3,5-dichlorobenzeneboronic acid, $\text{Cu}(\text{OAc})_2$, TEA, molecular sieves, CH_2Cl_2 ; (b) 3,5-dimethylbenzeneboronic acid, $\text{Cu}(\text{OAc})_2$, TEA, molecular sieves, CH_2Cl_2 ; (c) $\text{HOCH}_2\text{C}_6\text{H}_4\text{X}$, DIAD, PPh_3 .

Aralkyl aryl ethers were prepared using Mitsunobu conditions (Scheme 11; O. Mitsunobu, *Synthesis* **1981** 1-28). Alternatively aralkyl ethers can be prepared *via* a classical Williamson ether synthesis (J. March, *Advanced Organic Chemistry*, 4th Edition; Wiley & Sons: New York, 1992; pp. 386-87) or utilizing
 5 palladium-catalyzed coupling (M. Palucki *et al.*, *Palladium-catalyzed Intermolecular Carbon-Oxygen Bond Formation: A New Synthesis of Aryl Ethers*, *J. Am. Chem. Soc.* **1997** 119:3395-96).

SCHEME 11

Preparation of Diphenylamine Intermediates (Scheme 1; X = NR⁶)

Diphenylamine compounds within the scope of the present invention can be prepared by palladium-catalyzed coupling reactions as described by Hartwig (*Transition Metal Catalyzed Synthesis of Aryl Amines and Aryl Ethers from Aryl Halides and Triflates: Scope and Mechanism, Angew. Chem. Int. Ed. Eng.* 1998 37:2046-67)

Preparation of Diphenyl Methane Intermediates (Scheme 1; 2: X = CH₂ or C=O)

Diphenylmethane compounds of the present invention can be prepared by reduction of the corresponding benzoyl derivatives 42. While reductions are conveniently carried out with triethylsilylhydride and trifluoroacetic acid, a variety of other procedures to effect this transformation are well known within the art.

The preparation of the requisite benzoyl derivatives has been described in U. S. Patent No. 5,886,178 (D. A. Allen *et al.*). The synthesis of benzoyl substituted benzofuran derivatives have also been reported in U. S. Patent No. 4,780,480 (J. P. Dunn) and the scientific literature (J. P. Dunn *et al. Analgetic and Antiinflammatory 7-Aroylbenzofuran-5-ylacetic acids and 7-Aroylbenzothiophene-5-ylacetic Acids, J. Med. Chem.* 1986 29:2326) These references are hereby incorporated by reference in its entirety.

Introduction of the Heterocyclic Ring (Scheme 1; 3)

The oxadiazolone, thiadiazolone and triazolone compounds of the present invention can be prepared by cyclization of a diacyl hydrazone derivative according to formula V. Without wishing to be limited by a specific mechanism or sequence of reaction steps, the oxadiazolones can be prepared by treating an acylhydrazone IV with the appropriate acyl derivative and cyclizing the resulting diacyl compound. One skilled in the art will appreciate that IV is an ambident nucleophile and initial reaction could be at either the carbonyl oxygen or the nitrogen and subsequent ring closure of either produces the same product.

2-Oxo-2,3-dihydro-1,3,4-oxadiazoles **49** can be prepared by cyclization of an acyl hydrazide **46b** with phosgene (or equivalents such as carbonyl diimidazole, alkyl chloroformates and the like) to directly produce the desired oxadiazole. (A. Hetzheim, 1,3,4 Oxadiazoles in *Methoden der Organischen Chemie* (Houben-Weyl) E. Schaumann (ed), Hetarene III/Teil 3, Band E8c; Thieme Verlag, Stuttgart; 1994, pp531-536) (Scheme 13) 2-Oxo-2,3-dihydro-1,3,4-thiadiazoles **53** are prepared by condensation of an O-alkyl imidate **51** and methoxythiocarbonyl hydrazide which produce a 2-methoxy-3,4-thidiazole derivative **52** which was hydrolyzed to the corresponding 2-oxo-2,3-dihydro-1,3,4-thiadiazole **53** under acidic conditions (H. Kristinsson *et al.*, *Synthesis of Heterocycles. V. 1,3,4-Thiazol-2(3H)one*, *Helv. Chim. Acta* **1982** 65:2606). Alternatively, cyclization of N-acyl-N'-alkoxycarbonyl hydrazides with Lawesson's reagent can directly produce the thiadiazole (B. P. Rasmussen *et al.* *Bull. Soc. Chim. Fr.* **1985** 62). Triazolones **48** were prepared by carbamoylation of an acyl hydrazide **46d** with ethyl isocyanate to yield an N-acyl-N-carbamoylhydrazide **47** cyclized to the triazolone **48** upon treatment with methanolic potassium hydroxide.

DOSAGE AND ADMINISTRATION

The compounds of the present invention may be formulated in a wide variety of oral administration dosage forms and carriers. Oral administration can be in the form of tablets, coated tablets, dragées, hard and soft gelatine capsules, solutions, emulsions, syrups, or suspensions. Compounds of the present invention are efficacious when administered by other routes of administration including continuous (intravenous drip) topical parenteral, intramuscular, intravenous, subcutaneous, transdermal (which may include a penetration enhancement agent), buccal, nasal, inhalation and suppository administration, among other routes of administration. The preferred manner of administration is generally oral using a convenient daily dosing regimen which can be adjusted according to the degree of affliction and the patient's response to the active ingredient.

A compound or compounds of the present invention, as well as their pharmaceutically useable salts, together with one or more conventional excipients, carriers, or diluents, may be placed into the form of pharmaceutical compositions and unit dosages. The pharmaceutical compositions and unit dosage forms may be comprised of conventional ingredients in conventional proportions, with or without additional active compounds or principles, and the unit dosage forms may contain any suitable effective amount of the active ingredient commensurate with the intended daily dosage range to be employed. The pharmaceutical compositions may be employed as solids, such as tablets or filled capsules, semisolids, powders, sustained release formulations, or liquids such as solutions, suspensions, emulsions, elixirs, or filled capsules for oral use; or in the form of suppositories for rectal or vaginal administration; or in the form of sterile injectable solutions for parenteral use. A typical preparation will contain from about 5% to about 95% active compound or compounds (w/w). The term "preparation" or "dosage form" is intended to include both solid and liquid formulations of the active compound and one skilled in the art will appreciate that an active ingredient can exist in different preparations depending on the target organ or tissue and on the desired dose and pharmacokinetic parameters.

The term "excipient" as used herein refers to a compound that is useful in preparing a pharmaceutical composition, generally safe, non-toxic and neither biologically nor otherwise undesirable, and includes excipients that are acceptable for veterinary use as well as human pharmaceutical use. The term "excipient" as used herein includes both one and more than one such excipient.

Solid form preparations include powders, tablets, pills, capsules, cachets, suppositories, and dispersible granules. A solid carrier may be one or more substances which may also act as diluents, flavoring agents, solubilizers, lubricants, suspending agents, binders, preservatives, tablet disintegrating agents, or an encapsulating material. In powders, the carrier generally is a finely divided solid which is a mixture with the finely divided active component. In tablets, the active component generally is mixed with the carrier having the necessary binding capacity in suitable proportions and compacted in the shape and size desired. Suitable carriers include but are not limited to magnesium carbonate, magnesium stearate, talc, sugar, lactose, pectin, dextrin, starch, gelatin, tragacanth, methylcellulose, sodium carboxymethylcellulose, a low melting wax, cocoa butter, and the like. Solid form preparations may contain, in addition to the active component, colorants, flavors, stabilizers, buffers, artificial and natural sweeteners, dispersants, thickeners, solubilizing agents, and the like.

Liquid formulations also are suitable for oral administration include liquid formulation including emulsions, syrups, elixirs, aqueous solutions, aqueous suspensions. These include solid form preparations which are intended to be converted to liquid form preparations shortly before use. Emulsions may be prepared in solutions, for example, in aqueous propylene glycol solutions or may contain emulsifying agents such as lecithin, sorbitan monooleate, or acacia. Aqueous solutions can be prepared by dissolving the active component in water and adding suitable colorants, flavors, stabilizing, and thickening agents. Aqueous suspensions can be prepared by dispersing the finely divided active component in water with viscous material, such as natural or synthetic gums, resins, methylcellulose, sodium carboxymethylcellulose, and other well known suspending agents.

The compounds of the present invention may be formulated for parenteral administration (*e.g.*, by injection, for example bolus injection or continuous infusion) and may be presented in unit dose form in ampoules, pre-filled syringes, small volume infusion or in multi-dose containers with an added preservative. The compositions may take such forms as suspensions, solutions, or emulsions in oily or aqueous vehicles, for example solutions in aqueous polyethylene glycol. Examples of oily or nonaqueous carriers, diluents, solvents or vehicles include propylene glycol, polyethylene glycol, vegetable oils (*e.g.*, olive oil), and injectable organic esters (*e.g.*, ethyl oleate), and may contain formulatory agents such as preserving, wetting, emulsifying or suspending, stabilizing and/or dispersing agents. Alternatively, the active ingredient may be in powder form, obtained by aseptic isolation of sterile solid or by lyophilisation from solution for constitution before use with a suitable vehicle, *e.g.*, sterile, pyrogen-free water.

The compounds of the present invention may be formulated for topical administration to the epidermis as ointments, creams or lotions, or as a transdermal patch. Ointments and creams may, for example, be formulated with an aqueous or oily base with the addition of suitable thickening and/or gelling agents. Lotions may be formulated with an aqueous or oily base and will in general also containing one or more emulsifying agents, stabilizing agents, dispersing agents, suspending agents, thickening agents, or coloring agents. Formulations suitable for topical administration in the mouth include lozenges comprising active agents in a flavored base, usually sucrose and acacia or tragacanth; pastilles comprising the active ingredient in an inert base such as gelatin and glycerin or sucrose and acacia; and mouthwashes comprising the active ingredient in a suitable liquid carrier.

The compounds of the present invention may be formulated for administration as suppositories. A low melting wax, such as a mixture of fatty acid glycerides or cocoa butter is first melted and the active

component is dispersed homogeneously, for example, by stirring. The molten homogeneous mixture is then poured into convenient sized molds, allowed to cool, and to solidify.

5 The compounds of the present invention may be formulated for vaginal administration. Pessaries, tampons, creams, gels, pastes, foams or sprays containing in addition to the active ingredient such carriers as are known in the art to be appropriate.

10 The compounds of the present invention may be formulated for nasal administration. The solutions or suspensions are applied directly to the nasal cavity by conventional means, for example, with a dropper, pipette or spray. The formulations may be provided in a single or multidose form. In the latter case of a dropper or pipette, this may be achieved by the patient administering an appropriate, predetermined volume of the solution or suspension. In the case of a spray, this may be achieved for example by means of a metering atomizing spray pump.

15 The compounds of the present invention may be formulated for aerosol administration, particularly to the respiratory tract and including intranasal administration. The compound will generally have a small particle size for example of the order of five (5) microns or less. Such a particle size may be obtained by means known in the art, for example by micronization. The active ingredient is provided in a pressurized pack with a suitable propellant such as a chlorofluorocarbon (CFC), for example,
20 dichlorodifluoromethane, trichlorofluoromethane, or dichlorotetrafluoroethane, or carbon dioxide or other suitable gas. The aerosol may conveniently also contain a surfactant such as lecithin. The dose of drug may be controlled by a metered valve. Alternatively the active ingredients may be provided in a form of a dry powder, for example a powder mix of the compound in a suitable powder base such as lactose, starch, starch derivatives such as hydroxypropylmethyl cellulose and polyvinylpyrrolidone (PVP). The powder
25 carrier will form a gel in the nasal cavity. The powder composition may be presented in unit dose form for example in capsules or cartridges of *e.g.*, gelatin or blister packs from which the powder may be administered by means of an inhaler.

30 When desired, formulations can be prepared with enteric coatings adapted for sustained or controlled release administration of the active ingredient. For example, the compounds of the present invention can be formulated in transdermal or subcutaneous drug delivery devices. These delivery systems are advantageous when sustained release of the compound is necessary and when patient compliance with a treatment regimen is crucial. Compounds in transdermal delivery systems are frequently attached to an skin-adhesive solid support. The compound of interest can also be combined with a penetration enhancer,

e.g., Azone (1-dodecylaza-cycloheptan-2-one). Sustained release delivery systems are inserted subcutaneously into to the subdermal layer by surgery or injection. The subdermal implants encapsulate the compound in a lipid soluble membrane, e.g., silicone rubber, or a biodegradable polymer, e.g., polyactic acid.

5

Suitable formulations along with pharmaceutical carriers, diluents and excipients are described in *Remington: The Science and Practice of Pharmacy 1995*, edited by E. W. Martin, Mack Publishing Company, 19th edition, Easton, Pennsylvania. A skilled formulation scientist may modify the formulations within the teachings of the specification to provide numerous formulations for a particular route of administration without rendering the compositions of the present invention unstable or compromising their therapeutic activity.

10

The modification of the present compounds to render them more soluble in water or other vehicle, for example, may be easily accomplished by minor modifications (salt formulation, esterification, etc.), which are well within the ordinary skill in the art. It is also well within the ordinary skill of the art to modify the route of administration and dosage regimen of a particular compound in order to manage the pharmacokinetics of the present compounds for maximum beneficial effect in patients.

15

The term "therapeutically effective amount" as used herein means an amount required to reduce symptoms of the disease in an individual. The dose will be adjusted to the individual requirements in each particular case. That dosage can vary within wide limits depending upon numerous factors such as the severity of the disease to be treated, the age and general health condition of the patient, other medicaments with which the patient is being treated, the route and form of administration and the preferences and experience of the medical practitioner involved. For oral administration, a daily dosage of between about 0.01 and about 100 mg/kg body weight per day should be appropriate in monotherapy and/or in combination therapy. A preferred daily dosage is between about 0.1 and about 500 mg/kg body weight, more preferred 0.1 and about 100 mg/kg body weight and most preferred 1.0 and about 10 mg/kg body weight per day. Thus, for administration to a 70 kg person, the dosage range would be about 7 mg to 0.7 g per day. The daily dosage can be administered as a single dosage or in divided dosages, typically between 1 and 5 dosages per day. Generally, treatment is initiated with smaller dosages which are less than the optimum dose of the compound. Thereafter, the dosage is increased by small increments until the optimum effect for the individual patient is reached. One of ordinary skill in treating diseases described herein will be able, without undue experimentation and in reliance on personal knowledge, experience

25

30

and the disclosures of this application, to ascertain a therapeutically effective amount of the compounds of the present invention for a given disease and patient.

In embodiments of the invention, the active compound or a salt can be administered in combination with another antiviral agent, such as a nucleoside reverse transcriptase inhibitor, another nonnucleoside reverse transcriptase inhibitor or HIV protease inhibitor. When the active compound or its derivative or salt are administered in combination with another antiviral agent the activity may be increased over the parent compound. When the treatment is combination therapy, such administration may be concurrent or sequential with respect to that of the nucleoside derivatives. "Concurrent administration" as used herein thus includes administration of the agents at the same time or at different times. Administration of two or more agents at the same time can be achieved by a single formulation containing two or more active ingredients or by substantially simultaneous administration of two or more dosage forms with a single active agent.

It will be understood that references herein to treatment extend to prophylaxis as well as to the treatment of existing conditions, and that the treatment of animals includes the treatment of humans as well as other animals. Furthermore, treatment of a HIV infection, as used herein, also includes treatment or prophylaxis of a disease or a condition associated with or mediated by HIV infection, or the clinical symptoms thereof.

The pharmaceutical preparations are preferably in unit dosage forms. In such form, the preparation is subdivided into unit doses containing appropriate quantities of the active component. The unit dosage form can be a packaged preparation, the package containing discrete quantities of preparation, such as packeted tablets, capsules, and powders in vials or ampoules. Also, the unit dosage form can be a capsule, tablet, cachet, or lozenge itself, or it can be the appropriate number of any of these in packaged form.

The pharmaceutical compositions in Example 23 are given to enable those skilled in the art to more clearly understand and to practice the present invention. They should not be considered as limiting the scope of the invention, but merely as being illustrative and representative thereof.

The compounds of formula I may be prepared by various methods known in the art of organic chemistry. The starting materials for the syntheses are either readily available from commercial sources or are known or may themselves be prepared by techniques known in the art. The following examples (*infra*) are given

to enable those skilled in the art to more clearly understand and to practice the present invention. They should not be considered as limiting the scope of the invention, but merely as being illustrative and representative thereof. The starting materials and the intermediates of the synthetic reaction schemes can be isolated and purified if desired using conventional techniques, including but not limited to, filtration, distillation, crystallization, chromatography, and the like. Such materials can be characterized using conventional means, including physical constants and spectral data.

Unless specified to the contrary, the reactions described herein preferably are conducted under an inert atmosphere at atmospheric pressure at a reaction temperature range of from about -78 °C to about 150 °C, more preferably from about 0°C to about 125 °C, and most preferably and conveniently at about room (or ambient) temperature, e.g., about 20 °C. Moreover, the reaction conditions are exemplary and alternative conditions are well known. The reaction sequences in the following examples are not meant to limit the scope of the invention as set forth in the claims.

EXAMPLE 1

Ethyl 4-Chloro-3-methoxyphenylacetate

Step 1

A solution of 4-chloro-3-methoxytoluene (**9a**; 0.5 g; 3.2 mmol), NBS (0.57 g; 3.2 mmol) and benzoyl peroxide (0.031 g; 0.13 mmol) and 32 mL of DCE were heated at reflux for 3 h. The reaction mixture was cooled, diluted with CH_2Cl_2 and washed with water and brine. The organic extract was dried filtered and evaporated to yield the bromomethyl compound **9b** which was used without further purification.

Step 2

The 28 g (0.166 mmol) of **9b** from the previous step, NaCN (28 g; 0.58 mmol; 3.5 equiv.) and 500 mL of 90% aqueous EtOH were stirred at room temperature overnight. The crude residue was partitioned between EtOAc/ H_2O (359 mL of each), washed with brine, dried, filtered and evaporated. Silica gel chromatography and elution with a gradient (100% hexane \rightarrow 90:10 hexane:EtOAc) yielded 21 g of **9c**.

step 3

Gaseous HCl was slowly bubbled into a cooled solution of 4-chloro-3-methoxyacetonitrile (**9b**) in toluene (10mL), ether (10 mL) and EtOH (1 mL) for about 10 min. The reaction was stoppered and stored at -30 °C for one week. TLC failed to detect any remaining starting material. The solvent was evaporated and the yellow solid was stirred with Et₂O, filtered and washed with Et₂O and dried in a vacuum oven to yield
5 0.57 g (90%) of ethyl 4-chloro-3-methoxyphenylmethanimidate (**9d**).

step 4

A solution of 0.57 g of **9d** and 10 mL of H₂O was heated at 40 °C for 3 h. The reaction was cooled to rt and extracted with EtOAc. The reaction was dried (MgSO₄), filtered and evaporated and the resulting
10 product **9e** was used without further purification.

EXAMPLE 2

4-chloro-3-(3-bromo-5-fluorophenoxy)phenylacetonitrile

15

step 1

A mixture of NBS (1.066 g; 5.99 mmol), benzoyl peroxide (0.069 g; 0.28 mmol) and **54** (1.80 g; 5.70 mmol) and 20 mL of CCl₄ were heated to 90 °C for 2.5 h, cooled to rt, poured into water (100 mL) and extracted with CH₂Cl₂ (2 x 80 mL) and the combined organic extracts dried (Na₂SO₄), filtered and
20 evaporated to yield 2.25 g of bromomethyl derivative **55** as a colorless oil which was used directly in the subsequent step.

step 2

A mixture 2.25 g of **55**, NaCN (0.839 g; 17.12 mmol) and 20 mL of 90% aqueous ethanol were stirred at
25 room temperature for 24 h. The volume was reduced to about 25% of the original volume *in vacuo*. The resulting mixture was diluted with EtOAc (80 mL) and poured into 40 mL saturated NaCl and 40 mL of H₂O. The organic phase was dried (Na₂SO₄), filtered and evaporated and the crude product purified by silica gel chromatography and eluted with an hexane:EtOAc gradient (10:1 → 6:1) to yield 1.10 g (56.6%) of **56** as a colorless oil.

30

EXAMPLE 3

[3-(2-Chloro-phenoxy)-4-methyl-phenyl]-acetic acid ethyl ester

step 1

To a cooled solution of ethyl 4-hydroxy-3-methoxyphenylacetate (**4a**; 13.7 g; 65.2 mmol) and 260 mL of CH_2Cl_2 under N_2 atmosphere was added dropwise triflic anhydride (16 mL; 97.9 mmol) followed by dropwise addition of pyridine (8.9 mL; 8.8 mmol). The reaction was stirred in an ice-water bath for 3 h.

The solution was transferred to a separatory funnel and washed with water and brine, dried (Na_2SO_4), filtered and evaporated. to yield 21 g (90%) of **4b**.

step 2

To a solution of ethyl 3-methoxy-4-(trifluorosulfonyloxy)phenylacetate (**4b**) in 4 mL of THF cooled in an ice-water bath was added slowly a solution of $\text{Pd}(\text{dppf})\text{Cl}_2$ (0.024 g; 0.029 mmol) and DIBAL-H (6 mL; 0.058 mmol; 1.0M in PhMe) and a small quantity of THF followed by dimethylzinc (0.29 mL; 0.58 mmol; 2.0 M in PhMe). After addition was completed the ice bath was removed and the reaction allowed to warm to rt and then heated to reflux for 1 h. The reaction was carefully quenched with a small quantity of water, filtered through a pad of CELITE® and the solids washed thoroughly with EtOAc. The combined organic extracts were washed with water and brine, dried (MgSO_4) and the solvent evaporated to afford 0.240 g (85%) of ethyl 3-methoxy-4-methylphenylacetate (**4c**).

step 3

To a solution of **4c** (2.2 g; 8.0 mmol) and 250 mL CH_2Cl_2 cooled to -78°C was added dropwise *via* syringe BBr_3 (9.8 mL; 0.104 mol). After 1 h at -78°C the reaction was stirred for 4 h in an ice-water bath. The reaction mixture was re-cooled to -78°C and the reaction quenched aqueous NaHCO_3 then warmed to rt and the organic phase washed with water, saturated

NaHCO₃ and brine. The organic phase was dried (MgSO₄) and the solvent evaporated to afford 1.4 g of ethyl 3-hydroxy-4-methylphenylacetate (**5a**).

step 4

- 5 To a suspension of **5a** (4.8 g; 25 mmol), 2-chlorobenzeneboronic acid (7.8 g; 50 mmol), Cu(OAc)₂ (5 g; 27.5 mmol), powdered 4Å molecular sieves (15 g) and 250 mL of CH₂Cl₂. After 4 days starting material was still evident by tlc and an addition 5.0 g of the boronic acid was added. The reaction was stirred for an additional day and the suspension filtered through a pad of CELITE® and silica gel. The solids were washed well with CH₂Cl₂. The combined filtrates were washed sequentially with 2N HCl (2 x 25 mL),
10 NaHCO₃ (25mL), water and brine. The extracts were dried (MgSO₄), filtered and evaporated. The crude product was purified by silica gel chromatography and eluted with 25% EtOAc:hexane to yield 2.2 g (28%) of **33b**

step 6

- A mixture of 0.72 g (2.6 mmol) of **57**, HOAc (3.5 mL), HCl (7 mL) and H₂O (3.5 mL) were heated at
15 reflux for 6 h, cooled to rt, diluted with water and extracted with EtOAc. The combined extracts were washed sequentially with water, sat'd NaHCO₃, and brine, dried (Na₂SO₄), filtered and concentrated. The crude product was purified by chromatography on silica gel. The eluted product, which still contained the 3-chloropyridazine was dissolved in HOAc (20mL) and NaOAc (0.2 g) and reisolated to yield 0.4 g (50%) of **58** as a white solid; m.p. 116-118.

EXAMPLE 4

3-(2-Chloro-phenoxy)-4-ethyl-phenyl]-acetic acid ethyl ester

step 1

To a stirred solution of ethyl 3-methoxyphenylacetate (16.0 g; 82.38 mmol) in CH₂Cl₂ (200 mL) at rt was added dropwise AcCl (9.88 mL; 138.9 mmol) followed by stannic chloride (16.9 mL; 169 mmol; 1.0 M solution in CH₂Cl₂). The reaction mixture was stirred at rt for 6 h and poured into an ice-water mixture. The aqueous phase was extracted with CH₂Cl₂ and the combined extracts were washed with water, dried (Na₂SO₄) and the solvent removed *in vacuo*. The crude product 4e was purified by chromatography on silica gel and eluted with CH₂Cl₂:EtOAc (20:1) to yield 13.96 g (69.5%) of a white solid.

step 2

To a solution of 4e (19g; 80.42 mmol) and 200 mL of TFA cooled to 0°C was added an excess of Et₃SiH and the reaction allowed to warm to rt for 3 h. Excess TFA was removed *in vacuo* and the residue partitioned between water and CH₂Cl₂. The crude product was purified by chromatography on silica gel and eluted with CH₂Cl₂:hexane (3:1) to yield 3.0 g (16%) of 4f.

step 3

A solution of ethyl 4-ethyl-3-methoxyphenylacetate (4f; 3.0 g; 13.50 mmol) and CH₂Cl₂ (80 mL) was cooled to -78 °C and a solution of (5.10 mL; 53.94 mmol; 1.0 M in CH₂Cl₂) over 30 min. After 1 h at -78 °C the reaction was allowed to warm to rt and stirred for 12 h. The reaction was cooled in an ice-water bath and the reaction quenched with 20 mL of water. The aqueous phase was extracted with CH₂Cl₂:EtOAc (4:1 v/v), dried (Na₂SO₄), filtered and evaporated. The crude product was purified by

silica gel chromatography and eluted with a CH₂Cl₂:EtOAc gradient (100:1 → 100:4) to yield **5b** (2.0 g; 71%); m.s. 209.2 (M+H)⁺.

step 4

- 5 A solution of ethyl 4-ethyl-3-hydroxyphenylacetate (**5b**, 0.20 g; 0.96 mmol), 2-iodo-chlorobenzene (0.18 mL; 1.44 mmol), Cs₂CO₃ (0.469 g; 1.44 mmol), TMHD (0.020 mL; 0.096 mmol) and NMP (15 mL) was degassed with a stream of nitrogen for 15 m. Cuprous chloride (0.48 g; 4.8 mmol) was added and the solution was degassed. The reaction mixture was heated to 120 °C for 11 h then cooled to rt. The suspension was filtered through a pad of CELITE® and the solid washed thoroughly with EtOAc. The
10 combined filtrate was washed with 2N HCl, dried (Na₂SO₄) and the solvent evaporated. The product was purified by chromatography on silica gel and eluted with EtOAc:hexane (1:10). to yield 0.31 g (39%) of **33d**.

EXAMPLE 5

- 15 [3-(3-Chloro-phenoxy)-4-isopropyl-phenyl]-acetic acid ethyl ester

step 1

- To a suspension of PPh₃CH₃⁺ Br⁻ (36.29 g; 101.6 mmol) in THF (150 mL) cooled to -40 °C was added dropwise *n*-BuLi (40.6 mL; 1.6M in hexanes) and the resulting solution was allowed to warm to -10 °C
20 for 10 m and re-cooled to -40 °C. To the resulting solution was added in one portion ethyl 4-acetyl-3-methoxyphenylacetate (see Example 4; step 1) and the reaction mixture was stirred at 0 °C for 30 m and warmed to rt and stirred for an additional 2 h. The reaction mixture was diluted with hexane filtered through a pad of CELITE® and the solids wash with hexane:Et₂O (5:1 v/v; 60 mL). The combined
25 organic layers were washed with water (50 mL) and brine (50 mL), dried (Na₂SO₄), filtered and

evaporated to yield a yellow oil. The product was purified by silica gel chromatography and eluted with CH₂Cl₂:hexane (1:1 → 2:1) to yield 9.1 g of **4g**.

step 2

5 A suspension of **4g** (9.0 g; 38.41 mmol), 5% Pd/C (380 mg) in 50 mL HOAc and 50 mL EtOH was shaken under a hydrogen atmosphere (50 psi) for 7 h. The mixture was filtered through a pad of CELITE® and the filtered catalyst was washed with EtOAc. The solvents were evaporated under reduced pressure and the residue dissolved in MTBE and carefully washed with sat'd NaHCO₃, water and brine. The resulting solution was dried (Na₂SO₄), filtered and evaporated to yield ethyl 4-*iso*-propyl-3-
10 methoxyphenylacetate (**4h**; 9.0 g) as a yellow oil.

step 3

A solution of **4h** (3.38 g; 14.30 mmol) and CH₂Cl₂ (150 mL) were cooled to -78 °C and a solution of BBr₃ (5.41 mL; 57.22 mmol) in 130 mL of CH₂Cl₂ were added dropwise over a 30 m period. The reaction
15 mixture was stirred at -78 °C for 1 h, allowed to warm to rt for 4 h and re-cooled to -78 °C and carefully quenched with sat'd. NaHCO₃ (80 mL). The aqueous layer was extracted with CH₂Cl₂ (1 x 100 mL), EtOAc (50 mL) and the combined aqueous layers washed with water and brine, dried (Na₂SO₄) and evaporated to yield a light brown oil. The phenol was purified by silica gel chromatography and eluted with CH₂Cl₂:hexane (3:1) → CH₂Cl₂ → CH₂Cl₂:EtOAc (100:4) to yield ethyl 4-*iso*-propyl-3-
20 hydroxyphenylacetate (**5c**; 3.0 g; 94%)

step 4

To a solution of **5c** (1.0 g; 4.5 mmol), 3-chlorobenzenboronic acid (0.844 g; 5.4 mmol), cupric acetate (0.899 g; 4.95 mmol), 4Å molecular sieves (5.0 g) and CH₂Cl₂ (50 mL) was added TEA (3.14 mL; 22.53
25 mmol) and the reaction was stirred for 3 days. The reaction mixture was filtered through a pad of CELITE®. The top layer containing the molecular sieves was removed and stirred with CH₂Cl₂ and refiltered. The combined organic filtrates were washed with 2N HCl, brine, dried (Na₂SO₄), filtered and evaporated. The crude product was chromatographed with silica gel and eluted with a gradient of hexane/EtOAc (90%hexane/EtOAc) to yield **33f** (1.0 g; 66%).

30

step 6

A mixture of 0.64 g (1.44 mmol) of **59**, HOAc (12 mL), HCl (24 mL) and H₂O (12 mL) were heated at reflux for 16 h, cooled to rt and extracted with EtOAc. The combined extracts were washed with H₂O, dried (Na₂SO₄), filtered and concentrated *in vacuo* to afford a brown solid. The crude product was purified by chromatography on silica gel and eluted with a gradient of CH₂Cl₂:EtOAc (15:1 → 8:1) to yield 0.10 g (20%) of **60**.

EXAMPLE 6

Ethyl 4-methyl-3-(3-fluorophenoxy)phenylacetate

To a stirred solution of **32b** (0.80 g; 4.12 mmol) and 7 mL NMP under a N₂ atmosphere was added 1-bromo-3-fluorobenzene (0.69 mL; 6.18 mmol), TMHD (0.086 mL; 0.41 mmol), Cs₂CO₃ (2.68 g; 8.24 mmol) and Cu(I)Cl (0.204 g; 2.06 mmol). The reaction was heated to 120 °C for 3 h. The reaction mixture was cooled to ambient temperature, and quenched with a mixture of 2 N HCl and EtOAc. The aqueous layer was thrice extracted with EtOAc and the combined organic layers were washed with water and brine, dried (MgSO₄), filtered and evaporated to dryness. The crude product was chromatographed on silica gel and eluted with hexane:Et₂O (9:1) which yielded **33c** (0.60 g; 50%).

EXAMPLE 7

3-(3-Chloro-phenoxy)-4,5-dimethyl-benzoic acid ethyl ester

5

step 1

A mixture of 4-hydroxy-3-methoxyphenylacetic acid (**6a**; 1.0 g; 5.49 mmol) and hexamethylenetetramine (0.808 g; 5.76 mmol) and TFA (7 mL) were stirred and heated at 90 °C for 4 h. The reaction was cooled and excess TFA removed *in vacuo* and 35 mL of ice and water was added to the residue. The resulting dark brown solution was stirred at rt for 20 m. The aqueous solution was extracted with Et₂O (40 mL) and the extract was dried (Na₂SO₄), filtered and evaporated to afford 0.70 g of **6b** (61%; m.s. (M+H)⁺ = 211.13; mw = 210).

10

step 2

To a solution of **6b** (4.0 g; 19.03 mmol) in EtOH (80 mL) was added con H₂SO₄ (1 mL). The reaction was heated at reflux for 6 h. Approximately 80% of the EtOH was removed *in vacuo* and the residue partitioned between EtOAc/H₂O (1:1) the organic phase residue washed with 10% NaHCO₃, water (100 mL), dried (Na₂SO₄), filtered and evaporated to afford a brown oil **7a** (88%; m.s. (M+H)⁺ = 239.19; mw = 238.3).

20

step 3

A mixture of **7a** (3.70 g; 15.53 mmol), 5% Pd/C (0.350 g), HOAc (45 mL) were shaken under a H₂ atmosphere (40 psi) for 8 h. TLC showed product and the corresponding benzyl alcohol. An additional 300 mg of Pd/C in 25 mL HOAc was added and hydrogenation continued for another 8 h. A second

portion of 0.15 g of Pd/C in HOAc (15 mL) was added and reaction continued for another 12 h. The mixture was diluted with EtOAc and filtered through a pad of CELITE®. The catalyst was washed with EtOAc and the combined organic extracts dried (Na₂SO₄) and evaporated. The product was purified by silica gel chromatography and eluted with CH₂Cl₂:hexane (4:1) to afford 2.64 g of **7b** (75.8%).

5

step 4

To a solution of **7b** (5.87 g; 26.175 mmol) in CH₂Cl₂ cooled to 0 °C was added pyridine (3.60 mL; 44.51 mmol) followed by dropwise addition of triflic anhydride (6.605 mL; 39.26 mmol) over about 20 min. The reaction was stirred at 0 °C for 3.5 h. The reaction mixture was extracted with dilute HCl and half-saturated NaHCO₃, dried (Na₂SO₄) and evaporated to yield 9.41 g of **7c** as a brown oil (100%).

10

step 5

To a suspension of PdCl₂(dppf) (0.650 g; 0.785 mmol) in THF (40 mL) cooled to 0 °C was added dropwise a solution of DIBAL-H (1.0 M in PhMe; 1.57 mL; 1.57 mmol). The resulting mixture was stirred at 0 °C for 5 minutes and a solution of **7c** in 5 mL of THF was added followed by Me₂Zn (23 mL; 46.0 mmol; 1.0 M in PhMe). The mixture was stirred at 0 °C for 5 m and heated at reflux for 2.5 h then cooled to rt for 30 m. The reaction was poured into dilute HCl and extracted with EtOAc (2 x 100 mL), dried (Na₂SO₄), and evaporated. The crude product was purified by silica gel chromatography and eluted with CH₂Cl₂:hexane (1:2 → 1:1 → 2:1 v/v) to yield 5.1 g (87.6%) of **8**.

20

step 6

A solution of ethyl 3,4-dimethyl-5-methoxyphenylacetate (**8**; 0.560 g; 2.519 mmol) and CH₂Cl₂ (40 mL) was cooled to -78 °C and a solution of BBr₃ (10.1 mL; 10.1 mmol; 1.0 M in CH₂Cl₂) dropwise over 10 min. After 1 h at -78 °C the reaction was allowed to warm to rt and stirred for 12 h. The reaction was cooled in an ice-water bath and the reaction quenched with 15 mL of ice/water. The aqueous phase was extracted with CH₂Cl₂:EtOAc (3:1 v/v), dried (Na₂SO₄), filtered and evaporated to yield **8** (0.52 g; 99%; m.s. 209.21 (M+H)⁺).

25

step 7

To a suspension of ethyl 3,4-dimethyl-5-hydroxyphenylacetate (**8**, 1.0 g; 4.8 mmol), 3-chlorobenzeneboronic acid (0.901 g; 5.762 mmol), Cu(OAc)₂ (0.959 g; 5.28 mmol), powdered 4Å molecular sieves (5 g) and 40 mL of CH₂Cl₂. After 40 h starting material was still evident by tlc and an addition 0.35 g of the boronic acid was added. The reaction was stirred for an additional 72 h. The reaction mixture was filtered through a pad of CELITE® and silica gel. The solids were washed well with

30

CH₂Cl₂. The combined filtrates were washed sequentially with 2N HCl (2 x 25 mL), NaHCO₃ (25mL), water and brine. The extracts were dried (Na₂SO₄), filtered and evaporated. The crude product was purified by silica gel chromatography and eluted with EtOAc:hexane (1:15 → 1:10) to yield **33e** (1.0 g; 65%; m.s. (M+H)⁺ = 319.34, mw = 318).

5

step 8

To a solution of 1.0 g of **33e** (3.14 mmol), 0.935 g (6.276 mmol) of 3,6-dichloropyrazine in 10 mL dry DMF cooled in an ice-water bath was added portionwise 0.313 g NaH (7.825 mmol; 60% in oil). The reaction stirred at 0 °C for 5 m then was allowed to warm to ambient temperature and stirred for 14 hour. The reaction was poured onto a mixture of ice, water and sodium bisulfate. The mixture was extracted thoroughly with EtOAc and the combined extracts were washed with 5% LiCl, water and brine. The extract was dried (MgSO₄), filtered and evaporated and the residue chromatographed on silica gel and eluted with hexane:EtOAc (10:1 → 8:1) to yield 1.0 g (73.9%) of **61**: m.s. (M+H)⁺ = 431.29

10

step 9

A mixture of 1.0 g (2.318 mmol) of **61**, HOAc (12 mL), HCl (24 mL) and H₂O (12 mL) were heated at reflux for 16 h, cooled to rt and extracted with EtOAc. The combined extracts were washed with H₂O, dried (Na₂SO₄), filtered and concentrated *in vacuo* to afford a brown solid. The crude product was purified by chromatography on silica gel and eluted with a gradient of CH₂Cl₂:EtOAc (8:1) to yield 0.150 g (18%) of **62** as a brown solid; m.s. (M+H)⁺ = 341.27; mw = 340.8.

20

EXAMPLE 8

(4-chloro-2-methyl-3-phenoxy-phenyl)-acetonitrile

step 1

To a suspension of 3-hydroxy-2-methylbenzoic acid (**11**; 22.8 g; 0.15 mol) and water (300 mL) cooled in an ice-water bath was added 3 M NaOH to adjust pH to about 10 (*ca.* 60 mL). NaOCl (208 mL; 5.35% aqueous solution; 0.15 mol) was added dropwise over about 30 m while maintaining the temperature

between 2-6 °C. After the addition was completed, 90 mL of 3 M HCl was added in one portion. The resulting precipitate was collected and dried on a sintered glass filter. The crude product was recrystallized from Et₂O:hexane (*ca.* 3:1) to yield a yellow solid **12** (12.24 g; 44%).

5 step 2

A solution of **12** (12.24 g; 65.6 mmol), MeOH (200 mL) and con H₂SO₄ (3.85 mL) was stirred overnight at rt then heated to reflux for 6 h. The solution was cooled, concentrated to approximately 10% of the original volume and the residue redissolved in EtOAc. The organic phase was washed with sat'd. NaHCO₃ and brine, dried, filtered and evaporated. The crude product was purified by silica gel
10 chromatography and eluted with a EtOAc:hexane gradient (1:9 → 4:6). The combined fractions were evaporated to yield **13** (8.32 g; 63.2%).

step 3

To a solution of methyl 4-chloro-3-hydroxy-2-methylbenzoate (**13**; 1.0 g; 4.98 mmol), benzenboronic acid (1.52 g; 12.5 mmol), cupric acetate (1.00 g; 5.48 mmol), 4Å molecular sieves (1 g), and CH₂Cl₂ (25
15 mL) was added TEA (3.47 mL; 24.9 mmol) and the reaction was stirred overnight. Starting material was still detected by tlc and an additional 0.62 g of benzenboronic acid was added and stirred for another 24 h. The reaction mixture was filtered through a pad of CELITE®. The top layer containing the molecular sieves was washed with CHCl₃. The combined organic filtrates were evaporated. The crude product was
20 chromatographed with silica gel and eluted with hexane/EtOAc gradient (100:0 → 85:15) to yield **14** (0.82 g; 60%).

step 4

To a solution of methyl 4-chloro-2-methyl-3-phenoxybenzoate (**14**; 0.780g; 2.81 mmol) dissolved in
25 PhMe (20 mL) cooled in an ice-water bath was added dropwise DIBAL-H (7.41 mL; 7.41 mmol; 1.0 M in PhMe) The reaction was quenched by sequentially adding MeOH, H₂O, and con HCl. The organic phase was extracted with Et₂O. The combined organic extracts were washed with sat'd. NaHCO₃, water and brine, dried (Na₂SO₄), filter and evaporated to yield **15** as a white oil which was used in the next step without further purification.

30

step 5

To a solution of **15** (0.736 g; 2.96 mmol) dissolved in pyridine (10 mL) was added dropwise methanesulfonyl chloride (0.252 µL; 5.92 mmol) over 5 min. After 30 min a small quantity of starting material was evident and an addition 25 µL of methanesulfonyl chloride was added. The reaction was

partitioned between Et₂O and 5% HCl. The organic phase was twice washed with 5% HCl, water, sat'd. NaHCO₃ and brine. The organic extract was dried (MgSO₄), filtered and evaporated. The crude product was chromatographed on silica gel eluting with 10% EtOAc:hexane to yield the benzylic chloride **16** (0.220 g) as a colorless oil.

5

step 6

The benzyl chloride **16** (0.220 g; 0.82 mmol) was dissolved in EtOH (1 mL) and KCN (0.107 g; 1.64 mmol) and 1 mL of water. The mixture was heated to reflux and CH₃CN (0.3 mL) was added to produce a homogenous solution which was allow to reflux overnight. The reaction mixture was concentrated *in vacuo* and partitioned between water and CH₂Cl₂. The organic phase was washed twice with brine, dried (MgSO₄), filtered and evaporated to yield **17** (0.210 g) sufficiently pure for further processing.

10

EXAMPLE 9

Ethyl 4-chloro-3-(3-cyano-5-fluorophenoxy)phenylacetate

15

To a solution of ethyl 4-chloro-3-hydroxyphenylacetate (**34a**; 1.4 g; 6.5 mmol) and NMP (13 mL) was added potassium carbonate (2.7g; 19.6 mmol) and 1.2 g of 3,5-difluorobenzonitrile (1.2 g; 8.5 mmol). The reaction mixture was heated to 120 °C and monitored by TLC. After 3.5 h an additional 0.9 g of K₂CO₃ was added and at 5.5 h an additional 0.9 g of K₂CO₃ and 0.3 g of 3,5-difluorobenzonitrile was added. After 8 h of heating the reaction was cooled to rt and the reaction mixture was filtered through a pad of CELITE® and the solid cake was washed well with EtOAc. The filtrate was washed with 2 portions of 2N HCl, 1N NaOH, water and brine. The organic extract was dried (MgSO₄), filtered and evaporated to yield 1.3 g of the ether **35a**.

20

EXAMPLE 10

Ethyl 4-chloro-3-(2,5-dichlorophenoxy)phenylacetate

A solution of ethyl 4-chloro-3-hydroxyphenylacetate (**34a**; 2.0 g; 9.3 mmol), 2,5-dichloro-bromobenzene, Cs₂CO₃ (6.0 g; 18.6 mmol), TMHD (0.38 mL; 1.9 mmol) and NMP (15 mL) was degassed with a stream of nitrogen for 15 m. Cuprous chloride (0.5 g; 4.7 mmol) was added and the solution again was degassed. The reaction mixture was heated to 120 °C for 18 h then cooled to rt. The suspension was filtered through a pad of CELITE® and the solid washed thoroughly with EtOAc. The combined filtrate was washed with 2N HCl, dried (Na₂SO₄) and the solvent evaporated. The product was purified by chromatography on silica gel and eluted with EtOAc:hexane (1:10) to yield **35b** (0.554 g; 16%).

EXAMPLE 11

4-Chloro-3-(4-bromophenoxy)toluene

A solution of 2-chloro-4-methylphenol (**36**; 3.0 g; 21 mmol), 4-bromobenzeneboronic acid (5.0 g; 24 mmol), cupric acetate (4.2 g; 23.1 mmol), 4Å molecular sieves and CH₂Cl₂ (210 mL) was added TEA (9.8 mL; 70 mmol) and the reaction was stirred for 3 days. The reaction mixture was filtered through a pad of CELITE®. The top layer containing the molecular sieves was removed and stirred with CH₂Cl₂ and refiltered. The combined organic filtrates were washed with 2N HCl, brine, dried (Na₂SO₄), filtered and evaporated. The crude product was chromatographed with silica gel and eluted with a gradient of hexane/EtOAc (100:0 → 90:10) to yield **37a**.

EXAMPLE 12

4-chloro-3-phenoxytoluene

- 5 To a solution of benzenboronic acid (1.9 g; 15.8 mmol) dissolved in CH_2Cl_2 (250 mL) was added 2-chloro-5-methylphenol (**36**; 2.5 g; 17.5 mmol), cupric acetate (3.5 g; 19.3 mmol), TEA ((12.3 mL; 87.7 mmol) and 12.5 g of 4Å molecular sieves. The reaction was stirred for 24 h and an additional aliquot of benzenboronic (2.4 g; 19.3 mmol) was added and stirring continued for an additional 48 hr. The reaction mixture was filtered through a bed of CELITE® and the filtered solids were washed thoroughly with
- 10 CH_2Cl_2 . The combined organic extracts were washed with 2N HCl, H_2O , sat'd NaHCO_3 , H_2O and brine, dried (MgSO_4) filtered and evaporated. The crude product was purified by silica gel chromatography and eluted with hexane:EtOAc (9:1) to yield **37b** (1.6 g; 47.1 %) as a clear oil.

15

EXAMPLE 13

4-Chloro-2-fluoro-3-phenoxytoluene

step 1

- A solution of 4-chloro-2-fluoro-3-hydroxytoluene (**18**; 0.161 g; 1.0 mmol), *p*-fluoronitro-benzene (0.141 g; 1.0 mmol), K_2CO_3 (0.276 g; 2 mmol) and DMF (4 mL) was heated to reflux for 4 h under a N_2 atmosphere. The reaction was cooled to rt and poured into water and stirred for several minutes. The aqueous solution was extracted twice with CH_2Cl_2 and the combined organic extracts washed with brine, dried (MgSO_4), filtered and evaporated to yield **20**.
- 20

step 2

A solution of **20** (1.58 g; 5.3 mmol), stannous chloride dihydrate (6.0 g; 26.6 mmol) and EtOH (5 mL) were heated to 70 °C stirred overnight. The reaction mixture was added to a small quantity of ice and made basic with 10% Na₂CO₃. The aqueous phase was extracted with EtOAc (5 mL) which resulted in an emulsion. About 7 mL of ethylenediamine was added to chelate tin which resulted in a blue aqueous solution. The EtOAc was washed with water and brine, dried (NaHCO₃), filtered and evaporated to yield 1.35 g of **21** which was carried on to the next step.

step 3

A solution of **21** (0.830 g; 3.3 mmol) was dissolved in HOAc (2.25 mL) and added to a solution of ice-water (7.5 mL) and HCl (1.2 mL). A solution of NaNO₂ (0.254 g; 5.6 mmol) and H₂O (1.5 mL) was added over a 10-15 m period. The resulting solution was stirred for several minutes then added dropwise over 15 m to a suspension of FeSO₄·7H₂O (0.917 g; 3.3 mmol) and DMF (10.5 mL). The reaction was stirred for 0.5 h and a mixture of hexanes:EtOAc (1:1; 30 mL) was added. The organic phase was washed thrice with water, dried (MgSO₄), filtered and concentrated *in vacuo*. The dark oil was purified by chromatography on silica gel and eluted with an EtOAc:hexane gradient (0:100 → 20:80) which yielded **22** as a clear oil (0.450 g; 58%).

EXAMPLE 14

[3-(3-Bromo-5-fluoro-phenoxy)-4-chlorophenyl]acetonitrile (**63b**)

step 1

Cesium carbonate (11.4 g; 8.79 mmol) was added to a solution of 2-chloro-5-methylphenol (**18**; 2.5 g; 17.53 mmol) and NMP (16 mL). The resulting slurry was degassed and the flask alternately purged and refilled with nitrogen. 1,3-Dibromo-fluorobenzene (3.54 g; 28.13 mmol), TMHD (0.92 mL; 0.81 g; 4.41 mmol) and Cu(I)Cl (0.87 g; 8.79 mmol) were added sequentially and the reaction mixture was heated to 110 °C for 6 h. The reaction mixture was cooled to ambient temperature, filtered through a bed of CELITE® and the filter cake washed thoroughly with EtOAc. The filtrate was washed sequentially with

dilute HCl, dilute NaOH, water and brine. The organic extract was dried (Na₂SO₄), filtered and evaporated. The residue was chromatographed on silica gel and eluted with hexane:Et₂O which yielded 1.8 g (32%) of **37c** as a colorless oil.

5 step 2

A mixture of **37c** (1.8 g; 5.704 mmol), NBS (1.066 g; 5.989 mmol), benzoyl peroxide (0.069 g; 0.28 mmol) and CCl₄ (20 mL) was heated to 90 °C for 2.5 h. The reaction mixture was cooled to room temperature and poured into 100 mL of H₂O. The mixture was extracted with CH₂Cl₂ (2 x 80 mL), dried (Na₂SO₄) and evaporated to yield **63a** (2.25 g) as a colorless oil.

10

step 3

A solution of **63a** (2.25 g; 5.704 mmol), NaCN (0.839 g; 17.12 mmol) and 20 mL of 90% aqueous EtOH was stirred at room temperature for 24 h. The solvent was evaporated and the residue partitioned between EtOAc (100 mL) and H₂O (100 mL). The EtOAc phase was washed with H₂O and saturated brine. The organic extracts were dried (Na₂SO₄) and evaporated. The crude product was purified by silica gel chromatography and eluted with a hexane/EtOAc gradient (10:1 → 6:1) to yield 1.10 g (56.6%) of **63b** as a colorless oil.

EXAMPLE 15

[3-(3-Chloro-phenoxy)-4-ethyl-phenyl]-acetic acid ethyl ester

20

25

To a solution of ethyl 4-ethyl-3-hydroxyphenylacetate (**4f**; 1.0 g; 4.81 mmol), 3-chlorobenzenboronic acid (1.56 g; 10.1 mmol), cupric acetate (0.96 g; 5.29 mmol), 4Å molecular sieves (5 g), and CH₂Cl₂ (48 mL) was added TEA (3.34 mL; 24.05 mmol) and the reaction was stirred for 4 days. The reaction mixture was filtered through a pad of CELITE®. The top layer containing the molecular sieves was removed and stirred with CH₂Cl₂ and refiltered. The combined organic filtrates were washed with 2N HCl, brine, dried (Na₂SO₄), filtered and evaporated. The crude product was chromatographed with silica gel and eluted with hexane/EtOAc (90%hexane/EtOAc) to yield **33e** (0.38 g; 25%).

30

EXAMPLE 16

[3-(3-Bromo-phenoxy)-4-chloro-phenyl]-acetonitrile

To a flask was charged with 3-hydroxy-4-methylphenylacetonitrile (**32a**; 0.92 g; 6.2 mmol), Cu(OAc)₂ (1.3 g; 6.9 mmol), 3-bromobenzeneboronic acid (1.1 g; 5.5 mmol) and powdered 4Å molecular sieves, was added CH₂Cl₂ (62 mL) followed by pyridine (2.5 mL; 31 mmol). The reaction was stirred at rt for 3 days. The suspension was filtered through a bed of CELITE®/silica gel and the solid washed with CH₂Cl₂. The combined filtrates were washed sequentially with 2N HCl (2 x 25 mL), NaHCO₃ (25mL), water and brine. The extracts were dried (MgSO₄), filtered and evaporated. The crude product **76** was sufficiently pure to use in the next step.

EXAMPLE 17

[3-(3-Bromo-phenoxy)-4-fluoro-phenyl]-acetonitrile

step 1

To a solution of 2-fluoro-4-methylphenol (**79**; 3.0 g; 24 mmol), 3-bromobenzeneboronic acid (5.3 g; 24 mmol), cupric acetate (4.8 g; 23.1 mmol), 4Å molecular sieves (15 g) and CH₂Cl₂ (240 mL) was added TEA (17 mL; 120 mmol) and the reaction was stirred for 4 days. The molecular sieves were filtered and washed well with CH₂Cl₂. The combined organic filtrates were washed with 2N HCl, brine, 2N NaOH, water and brine, dried (Na₂SO₄), filtered and evaporated. The crude product was chromatographed with silica gel and eluted with hexane:EtOAc (90%hexane:EtOAc) to yield **80** (5.7 g; estimated purity 72%).

step 2

A solution of **80** (4.1 g; 14.6 mmol), NBS (2.6 g; 14.6 mmol), AIBN (0.25 g; 1.50 mmol) and 146 mL of CCl₄ was heated at reflux for 5.0 h, cooled to rt and the precipitated succinimide filtered through a pad of CELITE®. The filtrate was evaporated and the crude product **81a** was sufficiently pure to use in the next step.

The crude bromomethyl compound **81a** from the previous step was dissolved in 73 mL of 90% aq. EtOH and 2.5 g of NaCN (49.01 mmol) was added. The reaction mixture was stirred overnight at rt. The solid material was filtered through a pad of CELITE® and the filtrate was evaporated. The crude product purified by silica gel chromatography and eluted with 30% EtOAc:hexane to yield the nitrile **81b** (2.4 g; 54%).

EXAMPLE 18

(7-Hydroxy-benzofuran-5-yl)-acetic acid ethyl ester

28a: R = H
28b: R = COMe
28c: R = OAc

step 1
step 2

step 1

To a solution of **28a** (5.0g; 24.2 mmol) and anhydrous CH₂Cl₂ (75 mL) was added sequentially acetyl chloride ((2.42 mL; 33.9 mmol) and SnCl₄ (5.39 mL; 46.1 mmol; 1 M solution in CH₂Cl₂). The reaction was stirred at room temperature for 50 minutes and poured into a mixture of ice and 2 N HCl (200 mL). The organic phase was separated and diluted with about 50 mL of CH₂Cl₂ and thrice washed with water (100 mL) and once with brine (100 mL). The organic phase was dried (MgSO₄), filtered and evaporated to yield **28b** (6.0 g) which contained about 10% of **28a**. The crude product was used without further purification.

step 2

To an ice-cold solution of **28b** (6.01 g; 24.2 mmol) and CH₂Cl₂ (100 mL) under a nitrogen atmosphere was added sequentially a solution of MCPBA (11.9 g; 48.4 mmol) and CH₂Cl₂ (12 mL) followed by TFA (2.14 mL; 27.8 mmol). The reaction mixture was stirred at rt overnight. The reaction mixture was cooled to 0°C and a 5% aqueous Na₂SO₃ solution (150 mL) was added slowly with stirring. The mixture was stirred for 5 minutes after addition was completed and precipitated *m*-chlorobenzoic acid was filtered. The solid was with CH₂Cl₂ and the combined filtrates were washed with 10% NaOH (2 x 250 mL), 2 N HCl (200 mL), water and brine. The resulting solution was dried (MgSO₄), filtered through a pad of CELITE and concentrated *in vacuo* to yield **28c** (4.1g).

step 3

To a solution of dihydrofuran derivative **28c** (14.6 g; 0.0553 mol) and CCl₄ (500mL) was added NBS (10.3 g; 0.0580 mol) and AIBN (1.4 g). The reaction was heated to reflux for 30 minutes under a nitrogen atmosphere. The reaction was cooled, the solid succinimide filtered, and the organic phase was washed with 0.5 M NaHSO₄ (150 mL) and brine. The product was dried (Na₂SO₄), filtered and evaporated to yield 15.2 g of a yellow syrup. The crude product was purified by silica gel chromatography and eluted with a EtOAc:hexane gradient (3:97 → 10:90) to yield 10.3 g (78.1%) of **30**.

step 4

A solution of **30** (10.3 g; 39.3 mmol), EtOH (250 mL) and saturated NaHCO₃ (100 mL) were heated to reflux for 1 h. The reaction mixture was cooled to room temperature and the EtOH removed *in vacuo*. Ice was added to the residue aqueous solution and the reaction carefully acidified to about pH 2 with 2 N HCl. The resulting mixture was extracted with EtOAc (2 x 300 mL) and the combined organic phase washed with brine, dried (NaSO₄), filtered and evaporated to yield a brown oil (8.8 g). The crude product was run through a silica gel column with 15% EtOAc:hexane to yield **31** (5.44g; 62.9%) as a white solid.

EXAMPLE 19

5-(4-Chloro-3-phenoxy-benzyl)-3H-[1,3,4]oxadiazol-2-one (**49**)

- 5 To a solution of ester **46a** (517 mg, 2.03 mmol) dissolved in EtOH (10 mL) was added hydrazine hydrate (1.3 mL of an 85% solution) and the mixture was heated to reflux overnight. The volatile materials were removed, and the residual material was dissolved in EtOAc (50 mL). The solution was washed with brine (20 mL) and dried (MgSO₄), filtered, and the volatile materials were evaporated to provide the desired acyl hydrazine **46b** (460 mg, 82%) as a white solid. An oven dried 100 mL flask was charged
- 10 with the **46b** (152 mg, 0.55 mmol) and flushed with nitrogen. CH₂Cl₂ (6 mL) and pyridine (45 μL, 0.55 mmol) were added, and the solution was stirred for 1 min. A solution of phosgene in methylene chloride (570 μL, 1.93 M, 1.098 mmol) was added dropwise *via* syringe, and the reaction was stirred for 10 m. Water (15 mL) and CH₂Cl₂ (10 mL) were added to the reaction mixture, the layers were separated, and the organic layer was washed with water (10 mL) and brine (10 mL). The solution was dried with
- 15 anhydrous Na₂SO₄, the solution was filtered, and the volatile materials were evaporated to provide **27** (168 mg, 100%; ms (EI): (M⁺) = 302).

EXAMPLE 20

5-[4-Chloro-3-(2-chloro-phenoxy)-benzyl]-3H-[1,3,4]thiadiazol-2-one (**31**)

- HCl was bubbled through the ice cold solution of nitrile **50** (210 mg, 0.76 mmol) toluene (5 mL) and ethanol (49 μL, 0.87 mmol) for 10 min. The resulting mixture was stored in a sealed flask at 3 °C
- 25 overnight. Ethyl ether was added to the reaction mixture, and the imidate ester **51** (209 mg) was collected as a white solid by filtration. This material was added in 3 portions to a suspension of hydrazinecarbothioic acid O-methyl ester (55 mg, 0.52 mmol) (Mattes, R. *et al. Chem. Ber.* 1980 113:1981-88) in anhydrous dioxane (3 mL). The heterogeneous reaction mixture was stirred at rt for 4 h,

and then heated to reflux overnight. The reaction was then cooled to rt, and the solvent was removed by evaporation. Chilled water (20 mL) was added, and the mixture was thrice extracted CH₂Cl₂ (20 mL). The organic layer was washed with water (20 mL), brine (20 mL), and dried over sodium sulfate. The solution was filtered, and the solvent was evaporated. Purification of the remaining material by flash chromatography (eluent: 25% to 50% ethyl acetate: hexanes) provided the desired methoxythiadiazole **52**. A solution of **52**, THF (3 mL) and con HCl (1 mL) was stirred overnight. The solution was stirred overnight, ether (20 mL) was added, and the layers were separated. The organic layer was washed with water (10 mL), brine (10 mL), dried (MgSO₄). The solvent was evaporated, and the remaining material was purified by silica gel flash chromatography (10% → 25% EtOAc:hexanes) to provide 76 mg of **53** (38% from imidate ester; ms (EI): (M⁺) = 353).

EXAMPLE 21

5-[4-Chloro-3-(2-chloro-phenoxy)-benzyl]-4-methyl-2,4-dihydro-[1,2,4]triazol-3-one (**48**)

To a solution of ester **46c** (219 mg, 0.67 mmol) and EtOH (10 mL) was added hydrazine hydrate (1.2 mL; 85% aqueous solution) and the solution was heated to reflux for 4 h. The volatile materials were removed, and the remaining material was dissolved in EtOAc (50 mL). The solution was washed with water (20 mL), brine (20 mL), and dried (MgSO₄). The solution was filtered, and the volatile materials were evaporated to provide acyl hydrazine **46d** (200 mg, 96%) as a white solid. To a solution of **46d** (96 mg, 0.31 mmol) and anhydrous THF (4 mL) under a N₂ atmosphere was added ethyl isocyanate (40 μL, 0.50 mmol) and the mixture was stirred overnight. The volatile materials were evaporated, and the resulting diacylhydrazine **47** dissolved in methanol (4 mL). Potassium hydroxide (173 mg, 3.1 mmol) was added, and the mixture was heated to reflux for 2 days. CH₂Cl₂ (20 mL) and water (10 mL) were added, and the aqueous layer was acidified with 10% HCl. The layers were separated, and the aqueous layer was extracted twice with CH₂Cl₂ (20 mL). The combined organic layers were washed with water (10 mL), brine (10 mL), and dried (Na₂SO₄). The solution was filtered, the volatile materials evaporated,

and the residue was purified by silica gel column chromatography and eluted with EtOAc to provide 48 (54 mg, 48% from acylhydrazine 47; ms: 364 (M+H)⁺).

EXAMPLE 22

HIV Reverse Transcriptase Assay: Inhibitor IC₅₀ determination

HIV-1 RT assay was carried out in 96-well Millipore MultiScreen MADVNOB50 plates using purified recombinant enzyme and a poly(rA)/oligo(dT)₁₆ template-primer in a total volume of 50 µL. The assay constituents were 50 mM Tris/HCl, 50 mM NaCl, 1 mM EDTA, 6 mM MgCl₂, 5 µM dTTP, 0.15 µCi [³H] dTTP, 5 µg/ml poly (rA) pre annealed to 2.5 µg/ml oligo (dT)₁₆ and a range of inhibitor concentrations in a final concentration of 10% DMSO. Reactions were initiated by adding 4 nM HIV-1 RT and after incubation at 37°C for 30 min, they were stopped by the addition of 50 µl ice cold 20%TCA and allowed to precipitate at 4°C for 30 min. The precipitates were collected by applying vacuum to the plate and sequentially washing with 3 x 200 µl of 10% TCA and 2 x 200 µl 70% ethanol. Finally, the plates were dried and radioactivity counted in a Packard TopCounter after the addition of 25 µl scintillation fluid per well. IC₅₀'s were calculated by plotting % inhibition versus log₁₀ inhibitor concentrations.

Table 2	
Compound #	RT inhibition IC ₅₀ (µM)
4	0.19515
8	0.2865
9	0.4437
7	0.4473

EXAMPLE 23

PHARMACEUTICAL COMPOSITIONS

Composition for Oral Administration

Ingredient	% wt./wt.
Active ingredient	20.0%
Lactose	79.5%
Magnesium stearate	0.5%

The ingredients are mixed and dispensed into capsules containing about 100 mg each; one capsule would approximate a total daily dosage.

Composition for Oral Administration

Ingredient	% wt./wt.
Active ingredient	20.0%
Magnesium stearate	0.5%
Crosscarmellose sodium	2.0%
Lactose	76.5%
PVP (polyvinylpyrrolidone)	1.0%

The ingredients are combined and granulated using a solvent such as methanol. The formulation is then dried and formed into tablets (containing about 20 mg of active compound) with an appropriate tablet machine.

Composition for Oral Administration

Ingredient	Amount
Active compound	1.0 g
Fumaric acid	0.5 g
Sodium chloride	2.0 g
Methyl paraben	0.15 g
Propyl paraben	0.05 g
Granulated sugar	25.5 g
Sorbitol (70% solution)	12.85 g
Veegum K (Vanderbilt Co.)	1.0 g
Flavoring	0.035 ml
Colorings	0.5 mg
Distilled water	q.s. to 100 ml

The ingredients are mixed to form a suspension for oral administration.

Parenteral Formulation (IV)

Ingredient	% wt./wt.
Active ingredient	0.25 g
Sodium Chloride	qs to make isotonic
Water for injection to	100 ml

The active ingredient is dissolved in a portion of the water for injection. A sufficient quantity of sodium chloride is then added with stirring to make the solution isotonic. The solution is made up to weight with the remainder of the water for injection, filtered through a 0.2 micron membrane filter and packaged under sterile conditions.

Suppository Formulation

Ingredient	% wt./wt.
Active ingredient	1.0%
Polyethylene glycol 1000	74.5%
Polyethylene glycol 4000	24.5%

The ingredients are melted together and mixed on a steam bath, and poured into molds containing 2.5 g total weight.

5

Topical Formulation

Ingredients	grams
Active compound	0.2-2
Span 60	2
Tween 60	2
Mineral oil	5
Petrolatum	10
Methyl paraben	0.15
Propyl paraben	0.05
BHA (butylated hydroxy anisole)	0.01
Water	q.s. 100

All of the ingredients, except water, are combined and heated to about 60°C with stirring. A sufficient quantity of water at about 60°C is then added with vigorous stirring to emulsify the ingredients, and water then added q.s. about 100 g.

10

Nasal Spray Formulations

Several aqueous suspensions containing from about 0.025-0.5 percent active compound are prepared as nasal spray formulations. The formulations optionally contain inactive ingredients such as, for example, microcrystalline cellulose, sodium carboxymethylcellulose, dextrose, and the like. Hydrochloric acid may be added to adjust pH. The nasal spray formulations may be delivered via a nasal spray metered pump typically delivering about 50-100 microliters of formulation per actuation. A typical dosing schedule is 2-4 sprays every 4-12 hours.

15

The features disclosed in the foregoing description, or the following claims, or the accompanying drawings, expressed in their specific forms or in terms of a means for performing the disclosed function, or a method or process for attaining the disclosed result, as appropriate, may, separately, or in any combination of such features, be utilized for realizing the invention in diverse forms thereof.

20

The foregoing invention has been described in some detail by way of illustration and example, for

purposes of clarity and understanding. It will be obvious to one of skill in the art that changes and modifications may be practiced within the scope of the appended claims. Therefore, it is to be understood that the above description is intended to be illustrative and not restrictive. The scope of the invention should, therefore, be determined not with reference to the above description, but should instead be
5 determined with reference to the following appended claims, along with the full scope of equivalents to which such claims are entitled.

All patents, patent applications and publications cited in this application are hereby incorporated by reference in their entirety for all purposes to the same extent as if each individual patent, patent
10 application or publication were so individually denoted.
